Integra

AV Receiver

DTR-7.2

Instruction Manual

Thank you for purchasing the **Integra** AV Receiver. Please read this manual thoroughly before making connections and plugging in the unit. Following the instructions in this manual will enable you to obtain optimum performance and listening enjoyment from your new AV Receiver. Please retain this manual for future reference.

Contents

Important Safeguards

1. **Read Instructions** – All the safety and operating instructions should be read before the appliance is operated.

2. **Retain Instructions** – The safety and operating instructions should be retained for future reference.

3. **Heed Warnings** – All warnings on the appliance and in the operating instructions should be adhered to.

4. **Follow Instructions** – All operating and use instructions should be followed.

5. **Cleaning** – Unplug the appliance from the wall outlet before cleaning. The appliance should be cleaned only as recommended by the manufacturer.

6. **Attachments** – Do not use attachments not recommended by the appliance manufacturer as they may cause hazards.

7. **Water and Moisture** – Do not use the appliance near water –for example, near a bath tub, wash bowl, kitchen sink, or laundry tub; in a wet basement; or near a swimming pool; and the like.

8. **Accessories** – Do not place the appliance on an unstable cart, stand, tripod, bracket, or table. The appliance may fall, causing serious injury to a child or adult, and serious damage to the appliance. Use only with a cart, stand, tripod, bracket, or table recommended by the manufacturer, or sold with the appliance. Any mounting of the appliance should follow the manufacturer's instructions, and should use a mounting accessory recommended by the manufacturer.

PORTABLE CART WARNING

S3125A

9. An appliance and cart combination should be moved with care. Quick stops, excessive force, and uneven surfaces may cause the appliance and cart combination to overturn.

10. **Ventilation** – Slots and openings in the cabinet are provided for ventilation and to ensure reliable operation of the appliance and to protect it from overheating, and these openings must not be blocked or covered. The openings should never be blocked by placing the appliance on a bed, sofa, rug, or other similar surface. The appliance should not be placed in a built-in installation such as a bookcase or rack unless proper ventilation is provided. There should be free space of at least 20 cm (8 in.) and an opening behind the appliance.

11. **Power Sources** – The appliance should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your appliance dealer or local power company.

12. **Grounding or Polarization** – The appliance may be equipped with a polarized alternating current line plug (a plug having one blade wider than the other). This plug will fit into the power outlet only one way. This is a safety feature. If you are unable to insert the plug fully into the outlet, try reversing the plug. If the plug should still fail to fit, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the polarized plug.

13. **Power-Cord Protection** – Power-supply cords should be routed so that they are not likely to be walked on or pinched by items placed upon or against them, paying particular attention to cords at plugs, convenience receptacles, and the point where they exit from the appliance.

14. **Outdoor Antenna Grounding** – If an outside antenna or cable system is connected to the appliance, be sure the antenna or cable system is grounded so as to provide some protection against voltage surges and built-up static charges. Article 810 of the National Electrical Code, ANSI/NFPA 70, provides information with regard to proper grounding of the mast and supporting structure, grounding of the lead-in wire to an antenna-discharge unit, size of grounding conductors, location of antenna-discharge unit, connection to grounding electrodes, and requirements for the grounding electrode. See Figure 1.

15. **Lightning** – For added protection for the appliance during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the antenna or cable system. This will prevent damage to the appliance due to lightning and power-line surges.

16. **Power Lines** – An outside antenna system should not be located in the vicinity of overhead power lines or other electric light or power circuits, or where it can fall into such power lines or circuits. When installing an outside antenna system, extreme care should be taken to keep from touching such power lines or circuits as contact with them might be fatal.

17. **Overloading** – Do not overload wall outlets, extension cords, or integral convenience receptacles as this can result in a risk of fire or electric shock.

18. **Object and Liquid Entry** – Never push objects of any kind into the appliance through openings as they may touch dangerous voltage points or short-out parts that could result in a fire or electric shock. Never spill liquid of any kind on the appliance.

19. **Servicing** – Do not attempt to service the appliance yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.

20. **Damage Requiring Service** – Unplug the appliance form the wall outlet and refer servicing to qualified service personnel under the following conditions:
    A. When the power-supply cord or plug is damaged,
    B. If liquid has been spilled, or objects have fallen into the appliance,
    C. If the appliance has been exposed to rain or water,
    D. If the appliance does not operate normally by following the operating instructions. Adjust only those controls that are covered by the operating instructions as an improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the appliance to its normal operation,
    E. If the appliance has been dropped or damaged in any way, and
    F. When the appliance exhibits a distinct change in performance – this indicates a need for service.

21. **Replacement Parts** – When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock, or other hazards.

22. **Safety Check** – Upon completion of any service or repairs to the appliance, ask the service technician to perform safety checks to determine that the appliance is in proper operation condition.

23. **Wall or Ceiling Mounting** – The appliance should be mounted to a wall or ceiling only as recommended by the manufacturer.

24. **Heat** – The appliance should be situated away from heat sources such as radiators, heat registers, stoves, or other appliances (including amplifiers) that produce heat.

FIGURE 1:
EXAMPLE OF ANTENNA GROUNDING AS PER NATIONAL ELECTRICAL CODE, ANSI/NFPA 70

Precautions

1. Recording Copyright
Recording of copyrighted material for other than personal use is illegal without permission of the copyright holder.

2. AC Fuse
The fuse is located inside the chassis and is not user-serviceable. If power does not come on, contact your Integra/Onkyo authorized service station.

3. Care
From time to time you should wipe the front and rear panels and the cabinet with a soft cloth. For heavier dirt, dampen a soft cloth in a weak solution of mild detergent and water, wring it out dry, and wipe off the dirt. Following this, dry immediately with a clean cloth. Do not use rough material, thinners, alcohol or other chemical solvents or cloths since these could damage the finish or remove the panel lettering.

4. Power

WARNING
BEFORE PLUGGING IN THE UNIT FOR THE FIRST TIME, READ THE FOLLOWING SECTION CAREFULLY.

The voltage of the available power supply differs according to country or region. Be sure that the power supply voltage of the area where this unit will be used meets the required voltage (e.g., AC 230 V, 50 Hz or AC 120 V, 60 Hz) written on the rear panel.

For U.S. models

Note to CATV system installer:
This reminder is provided to call the CATV system installer's attention to Section 820-40 of the NEC which provides guidelines for proper grounding and, in particular, specifies that the cable ground shall be connected to the grounding system of the building, as close to the point of cable entry as practical.

**FCC Information for User**

CAUTION:
The user changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
NOTE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.
For Canadian models

NOTE: THIS CLASS B DIGITAL APPARATUS COMPLIES WITH CANADIAN ICES-003.

For models having a power cord with a polarized plug:

CAUTION: TO PREVENT ELECTRIC SHOCK, MATCH WIDE BLADE OF PLUG TO WIDE SLOT, FULLY INSERT.

Modèle pour les Canadien

REMARQUE: CET APPAREIL NUMÉRIQUE DE LA CLASSE B EST CON-FORME À LA NORME NMB-003 DU CANADA.

Sur les modèles dont la fiche est polarisée:

ATTENTION: POUR ÉVITER LES CHOCS ÉLECTRIQUES, INTRODUIRE LA LAME LA PLUS LARGE DE LA FICHE DANS LA BORNE CORRESPONDANTE DE LA PRISE ET POUSSER JUSQU'AU FOND.

Features

Amplifier Features

- 100 W×2 (Front)/100 W (Center)/100 W×2 (Surround)/100 W (Surround Back) at 8 Ω, 20Hz-20kHz, 0.08% THD (FTC)
- 6 Channel Amplifier
- Wide Range Amplifier Technology (WRAT)
- Linear Optimum Gain Volume Circuitry
- 192 kHz/24 Bit D/A Converters (except for Surround Back L/R)
- Ready for HDTV, Progressive-Scan DVD and DVD-Audio
- Zone-2 Capability

Audio/Video Features

- THX® Surround EX®
- THX Select Certified
- Dolby®* Digital, Dolby Pro Logic II
- DTS, DTS-ES Discrete 6.1, DTS-ES Matrix 6.1 and DTS Neo:6
- Theater-Dimensional™ Virtual Surround Mode
- Non-Scaling Configuration
- Onscreen displays (Basic menu/Advanced menu)
- 2 Wideband Component-Video Inputs/1 Output
- Composite to S-Video Conversion
- 6 S-Video Inputs/3 Outputs
- 6 Assignable Digital Inputs (3 optical/3 coaxial), 1 outputs, and 1 Digital Input (optical)
- A-BUS Ready
- 12 V Trigger

- Pre Out Terminals for Front L/R, Center, Surround L/R, Surround back L/R and Subwoofer

FM/AM Tuner Features

- 40 FM/AM random presets
- FM auto tuning

Other Performance Features

- IntelliVolume
- Character Input
- Powerful backlit/preprogrammed learning remote with macro and mode-key LEDs

THX Select
Before any home theatre component can be THX Select certified, it must pass a rigorous series of quality and performance tests. Only then can a product feature the THX Select logo, which is your guarantee that the Home Theatre products you purchase will give you superb performance for many years to come. THX Select requirements define hundreds of parameters, including power amplifier performance, and pre-amplifier performance and operation for both digital and analog domains. THX Select receivers also feature proprietary THX technologies (e.g., THX Mode, see page 40) which accurately translate film soundtracks for home theater playback.

Supplied accessories

Check that the following accessories are supplied with the DTR-7.2.
AM loop antenna × 1
FM indoor antenna × 1
Power cord × 1
Remote controller × 1
Batteries (AA, R6 or UM-3) × 2

Before using this unit

Installing the remote controller batteries

1. **Remove the battery compartment cover by pressing and sliding the cover.**

2. **Insert two AA (R6 or UM-3) batteries into the battery compartment. Carefully follow the polarity diagram (positive (+) and negative (–) symbols) inside the battery compartment.**

3. **After batteries are installed and seated correctly, replace the compartment cover.**
Notes:
- Do not mix new batteries with old batteries or different kinds of batteries.
- To avoid corrosion, remove the batteries if the remote controller is not to be used for a long time.
- Remove dead batteries immediately to avoid damage from corrosion. If the remote controller does not operate smoothly, replace both the batteries at the same time.

Using the remote controller

Point the remote controller toward the remote control sensor. The Standby indicator lights up when the unit receives a signal from the remote controller.
Notes:
- Place the unit away from strong light such as direct sunlight or inverted fluorescent light which can prevent proper operation of the remote controller.
- Using another remote controller of the same type in the same room or using the unit near equipment which uses infrared rays may cause operational interference.
- Do not put objects on the remote controller. Its buttons may be pressed by mistake and drain the batteries.
- Make sure the audio rack doors do not have colored glass. Placing the unit behind such doors may prevent proper remote controller operation.
- If there is any obstacle between the remote controller and the remote control sensor, the remote controller will not operate.

Front panel facilities

For operational instructions, see page indicated in brackets [ ].

① Power switch [26]

Turns on and off the main power supply for the DTR-7.2.

② Standby/On button [26]

When this button is pressed with the main power switch turned on, the DTR-7.2 turns on and the display lights up. Press again to return the DTR-7.2 to the standby state.

③ Standby indicator [7, 26]

Lights when the DTR-7.2 is in the standby state and flashes when a signal is received from the remote controller.

④ Display button [52]

The Display button is used to display information about the current input source signal. Each time you press the Display button, the screen changes to show you different information concerning the input signal.

⑤ Dimmer button [52]

Press to set the brightness of the front display. There are 3 settings available: normal, dark, and very dark.

- The dimmer control for the front display can be performed at the remote controller.

⑥ Front display

⑦ Rec Out/Zone 2/Off buttons [54, 55]

These buttons allow you to use the DTR-7.2 to output to a remote zone (Zone 2) or to another component for recording purposes (Rec Out). Press the Rec Out button to output the audio and video signals to a recording component for recording purposes. Press the Zone 2 button to enjoy the output from the DTR-7.2 in a different room, which is referred to as a remote zone (Zone 2).

When either button is pressed, the currently selected input source for recording or outputting to the remote zone is displayed in the front panel display. If "SOURCE" is displayed, then the same input source as that selected for the main zone will be output.

To select an input source, press the desired button (Rec Out or Zone 2) and then press one of the input source button within 5 seconds. That source will be output for recording or viewing in the remote zone.

To set the Rec Out or Zone 2 output to the source channel, press that button twice in succession. To turn off the Rec Out or Zone 2 output, press that button and then press the Off button within 5 seconds.

Note:
The Rec Out and Zone 2 buttons use the same circuit and therefore cannot be used at the same time. When Rec Out is selected, nothing is output to Zone 2, and vice versa. When Zone 2 is selected, Rec Out is automatically fixed to SOURCE.

⑧ Master Volume dial [50, 53]

The Master Volume dial is used to control the volume for the main zone. The volume for the remote zone (Zone 2) is independent.

⑨ Video 5/Video Cam Input terminals [19]

For connecting a video camera or game device.

⑩ Input source buttons (DVD, Video 1–5, Tape, FM, AM, Phono, and CD) [26, 48, 50, 55]

These buttons are used to select the input source for the main zone. To select the input source for the remote zone (Zone 2) or recording out (Rec Out), first press the Zone 2 or Rec Out button, and then the desired input source button. The input channel with its indicator lit red is output to Rec Out and the one with its indicator lit green is output to Zone 2.

⑪ Audio Selector button [53]

This button is used to select the type of audio input signal. Each time pressed, the setting cycles from "Auto" → "Multich" → "Analog" and back. When multichannel is not selected, the setting just changes back and forth between "Auto" and "Analog."

⑫ Phones jack [50]

This is a standard stereo jack for connecting stereo headphones.

⑬ Upsampling indicator [42]

Lights during upsampling. This function is available when the input source is Analog/PCM and the listening mode is set to the stereo or surround (Dolby Pro Logic II only) mode.

⑭ Remote control sensor [7]

⑮ Tuning ▲/▼, Preset ◄/►, cursor (◄/►/▲/▼) buttons [27, 48, 49]

To tune in a radio station, use the ▲/▼ buttons. The tuner frequency is displayed in the front display and it can be changed in 50 kHz increments for FM and 10 kHz increments for AM.

When FM is selected, you can hold down one of the Tuning buttons and then release it to activate the auto-search feature. It will search for a station in the direction of the button you pressed and stop when it tunes into one. When navigating through the menu settings, these buttons move the cursor up or down (or change the highlighted item).

To select a radio station that was stored using the Memory button, use the ◄/► buttons.

When navigating through the menu settings, these buttons select the value or item that you selected with the Tuning ▲/▼ buttons.

When you press the Setup button, the cursor indicators light and the Setup button becomes able to be used for setup menu operations.

⑯ Setup button [27]

Press to enter the setup menu. When pressed, the cursor (◄/►/▲/▼) indicators light. The OSD menu will appear on the TV monitor as well as the front display on the DTR-7.2.

⑰ Enter button [27]

Press to display the screen for the selected item in the Setup Menu.

9

Front panel facilities

⑱ **Return button [27]**

Press to exit the Main menu level or go back one level up.

⑲ **Memory button [49]**

This button is used to assign the radio station that is currently tuned in to a preset channel or delete a previously preset station.

⑳ **FM Mode button [48]**

If you are listening to an FM radio station in stereo and the sound cuts out or there is a great deal of noise, switch from STEREO to MONO. Each time this button is pressed, the AUTO indication turns on and off, and the stereo mode changes from AUTO to MONO and vice versa.

㉑ **Listening Mode buttons [51]**

Press these buttons to select a listening mode for the current input source.

Stereo: Selects for normal stereo output.

Surround: Selects for the Dolby Pro Logic, Neo:6, Dolby Digital, or DTS listening modes.

THX: Selects for the THX listening mode.

DSP ◄/►: Switches to the listening mode before or after the current one.

㉒ **Direct button [51]**

The direct mode outputs the sound without sound adjustment or filtration. In the direct mode, even if the Subwoofer setting of the Speaker Config sub-menu is set to "Yes," no sound is output from the subwoofer and the left and right channels are output, as is, to the left and right speakers. Even for multichannel input signals, the sounds are not passed through the sound adjustment circuits.

Remote controller
① **SEND/LEARN indicator**

This indicator acts as a guide when commands are programmed into or sent by the remote controller. It also warns the user when an error is made or battery power is low.

② **ON/STDBY button [26]**

ON: Turns on the DTR-7.2.
STDBY: Places the DTR-7.2 in the standby state.
Be aware that pressing the STDBY button only places the DTR-7.2 in standby and does not turn the power completely off.

③ **SLEEP button [52]**

Sets the sleep function.
The SLEEP button enables you to set the DTR-7.2 to turn off automatically after a specified time period.

④ **DIRECT MACRO button [68]**

For executing and programming the Direct Macro function.

⑤ **MODE buttons and indicators [56-59, 62-69]**

For selecting the component to be operated by the remote controller. When a MODE button is pressed, it will light green for 8 seconds. The selected MODE button will also light whenever any other operation button is pressed to tell you which mode the remote controller is in.

⑥ **RETURN button [27]**

For entering the selected setting and returning to the previous menu.

⑦ **CH ⊕/⊖, DISC ⊕ button [49, 56-58, 62, 63]**

When in the RCVR mode, for selecting a tuner preset channel.
For selecting the disc to be played back for components with disc changers when in the DVD or CD modes.

⑧ **CH SEL/TOP MENU button**

CH SEL: For selecting the speaker for level adjustment when in the RCVR mode. Used together with the LEVEL ▲/▼ buttons. [52]

TOP MENU: When in the DVD mode, for displaying the menu screen(s) recorded on DVD media. [58]

10

Remote controller

⑨ **AUDIO/TV/VCR button**

AUDIO/A: For selecting the audio input signal. The setting changes from "Auto" to "Multich" to "Analog" and back each time this button is pressed. [53]

TV/VCR: Must be preprogrammed for use in the TV and VCR modes. [63]

⑩ **LEVEL ▼/ANGLE and LEVEL ▲/SUBTITLE buttons**

LEVEL ▼/▲: Select the speaker whose volume is to be adjusted using the CH SEL button and adjust the volume using the LEVEL ▲/▼ buttons in the RCVR mode. [52]

ANGLE: When in the DVD mode, for selecting a camera angle when a DVD-Video is recorded with multiple angle playback. [58]

SUBTITLE: When in the DVD mode, for selecting one of the subtitle languages recorded on a DVD-Video. [58]

⑪ **CD/TAPE/DVD/MD operation buttons [56-59]**

For operating other Integra/Onkyo components connected to the DTR-7.2 through the ꓤꓲ terminals.

⑫ **INPUT SELECTOR buttons [50]**

Selects an input source.
Same as the input selector buttons on front panel of the DTR-7.2. The input source for each buttons is given here. DVD:DVD, CD:CD, V1:VIDEO1, V2:VIDEO2, V3:VIDEO3, V4:VIDEO4, V5:VIDEO5, TAP:TAPE, TUN:FM/AM, PH:PHONO.

⑬ **Numeric key/Listening mode SP A, B/ Re-EQ/DISPLAY/DIMMER buttons**

1 to 9, +10, --/---, 0: For entering the number of a track. [57-63]

STEREO, DIRECT, DSP ◄/►, SURR, THX: You can select a listening mode. [51]

SP A, SP B: Not used with the DTR-7.2.

Re-EQ: Depending on the listening mode, you can turn the cinema re-equalization function on or off. [42, 44]

DISPLAY: For changing the display in the front display. [52]

DIMMER: Adjusts the display brightness.
There are three settings available: normal, dark and very dark. [52]

⑭ **LIGHT button**

For illuminating the buttons of the remote controller.

This button is useful when using the remote controller in dark locations. When pressed, the buttons on the remote controller light green.

The button for the mode currently selected lights brighter than the rest.

⑮ **MODE MACRO button [67]**

For executing and programming the Macro function.

⑯ **SETUP button [27]**

For displaying and quitting the Setup menu.

⑰ **▲/▼/◄/►, ENTER button [27]**

When selecting items in the Setup menu, press the upper and lower portions to select an item, press the right and left portions to select parameter values or modes, and press ENTER to select the item.

⑱ **VOL △/▽ button [50, 53]**

For adjusting the volume.

⑲ **TEST/MENU button**

TEST: Outputs a test tone for setting speaker levels.
Use this button in conjunction with the LEVEL ▲/▼ and CH SEL buttons to calibrate the speakers levels without entering the Setup menu. When TEST button is pressed, the test noise (pink noise) is output. Use the LEVEL ▲/▼ buttons to increase or decrease the sound level. Use the CH SEL button to change from speaker to speaker. For a more detailed explanation of how to calibrate the speaker levels, see page 32.

MENU: When in the DVD mode, this button displays the DVD menu. [58]

⑳ **MUTING button [50]**

Activates the mute function.

㉑ **ZONE 2/SEARCH/ENTER button**

ZONE 2: When in the RCVR mode, press this button to perform operations on the remote zone (Zone 2). [54]

SEARCH: When in the DVD mode, for finding the specific section on a disc where you want to start playback. [58]

ENTER: When in the MD mode, for confirming the selection. [59]

Rear panel facilities

Here is an explanation of the terminals found on the rear of the DTR-7.2 and how they are used. Before connecting your audio and video components, be sure to read this section carefully and then proceed to the explanations on how to connect each individual component (see page 16).

- **Be sure to always refer to the instructions that came with the component that you are connecting.**
- **Do not plug in the power cord until all connections have been made.**
- **For input jacks, red connectors (marked R) are used for the right channel, white connectors (marked L) are used for the left channel, and yellow connectors (marked V) are used for video connection.**

- **Insert all plugs and connectors securely. Improper connections can result in noise, poor performance, or damage to the equipment.**

Improper connection

Inserted completely
- **Do not bind audio/video connection cables with power cords and speaker cables. Doing so may adversely affect the picture and sound quality.**

---
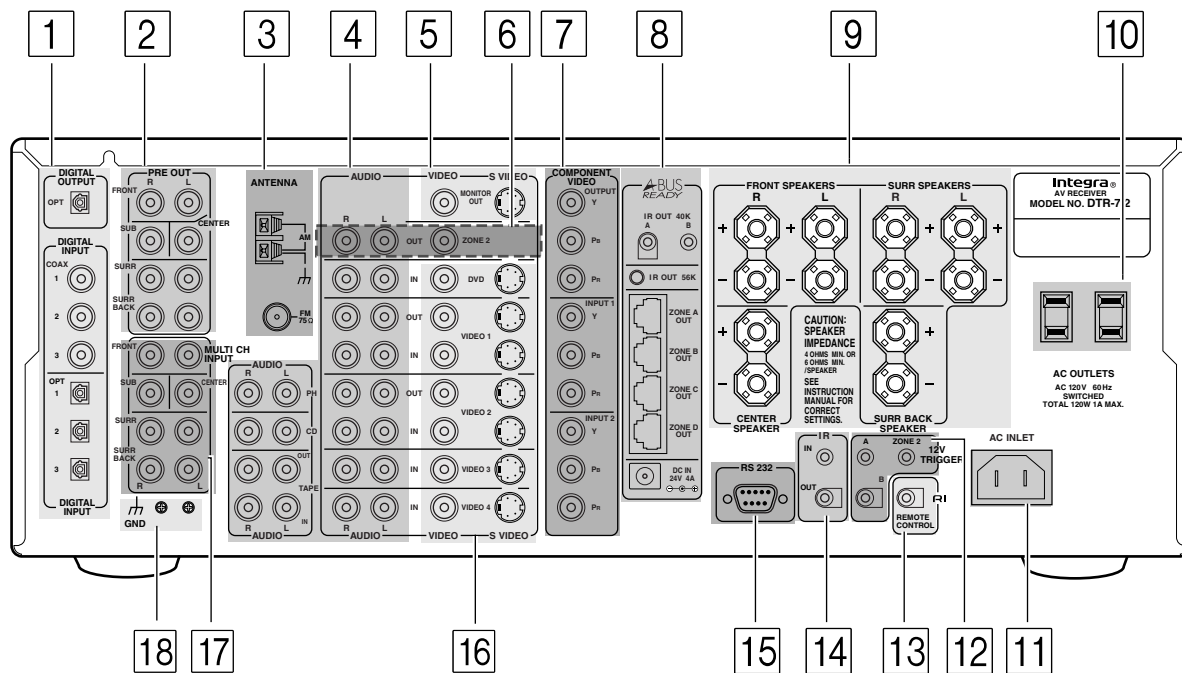

1 | DIGITAL INPUT/OUTPUT
(coaxial and optical)

These are the digital audio inputs and outputs on the rear panel. There are three digital inputs with coaxial jacks and three with optical jacks. The inputs accept digital audio signals from a compact disc, LD, DVD, or other digital source component. For digital output, there is 1 optical output. The digital outputs can be connected to MD recorders, CD recorders, DAT decks, or other similar components.

- Since an analog connection must be made when using Rec Out or Zone 2, make sure that the connection to the input source is not digital only, but analog as well.
- When using one of the optical input or output jacks, remove the protective cap and keep it safely. When the jack is not used, replace the protective cap.
- When using an optical input or output jack, always use an optical fiber cable.

COAXIAL   **Coaxial cable**
OPTICAL   **Optical fiber cable**
Optical digital input terminal
An optical digital input terminal is equipped with a protection cap. When connecting, remove this cap. When not using, put the cap back on the terminal.

Rear panel facilities

2 PRE OUT

These jacks are for connecting auxiliary power amplifier.

Using auxiliary power amplifiers allows you to listen at louder volumes than with the DTR-7.2 alone. If power amplifiers are used, connect each speaker to the corresponding power amplifier.
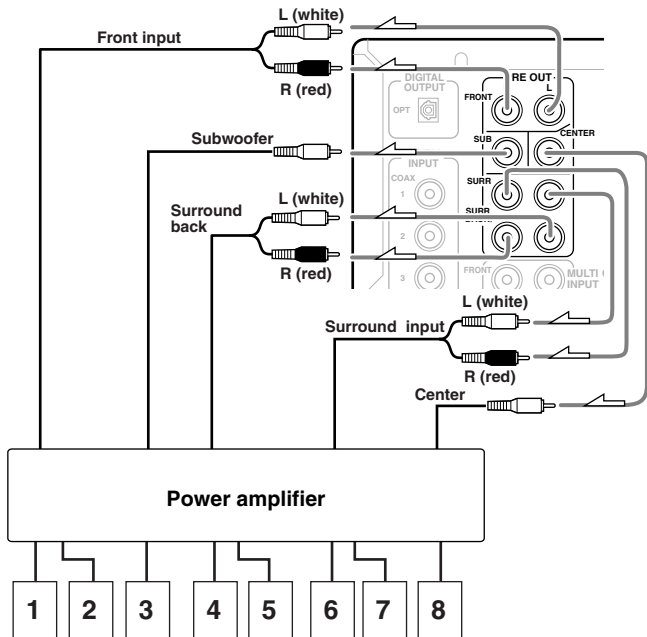

1. **Front left speaker**
2. **Front right speaker**
3. **Subwoofer**
4. **Surround back left speaker**
5. **Surround back right speaker**
6. **Surround left speaker**
7. **Surround right speaker**
8. **Center speaker**

3 ANTENNA

These jacks are for connecting the FM indoor antenna and AM loop antenna that are supplied with the DTR-7.2.

4 AUDIO IN/OUT

These are the analog audio inputs and outputs. There are eight audio inputs and 3 audio outputs. The audio inputs and outputs require RCA-type connectors.

• When connecting a VCR or other video component, make sure you connect the audio and video leads together (i.e., both to VIDEO 3).

• The PHONO (PH) input jacks on the DTR-7.2 is designed for use with turntables that use moving magnet cartridges.

RCA type
5 MONITOR OUT

The monitor output includes both composite video and S video configurations. This output is for connecting television monitors or projectors.

6 ZONE 2 AUDIO/VIDEO OUT

Connect the device that will be used in the remote zone (Zone 2). For more information regarding how to make the connections, refer to "Connecting the remote zone (Zone 2) speakers" on page 24.

7 COMPONENT VIDEO INPUT/OUTPUT

If your DVD player or other device has component video connectors, be sure to connect them to these component video connectors on the DTR-7.2. The DTR-7.2 has two component video input connectors to obtain the color information (Y, P_B, P_R) directly from the recorded DVD signal or other video component and one component video output connector to output it directly into the matrix decoder of the display device. By sending the pure DVD component video signal directly, the DVD signal forgoes the extra processing that normally would degrade the image. The result is vastly increased image quality, with incredibly lifelike colors and crisp detail.

Y P_B P_R RCA type
8 A-BUS

Congratulations for purchasing a most efficient, modern-day remote controllable whole house audio system. A-BUS is a simple, efficient, elegant audio distribution system. The wiring installation time is significantly reduced as only a single CAT-5 wire is run to each location. A-BUS is easy to use, reliable, affordable, and most of all, far better sounding than conventional autoformer based volume controls.

ZONE A/B/C/D: Use a CAT-5 (eight conductor twisted) cable to connect directly from the receiver's A-BUS RJ45 Hub to an A-BUS keypad. A-BUS outputs enable connection up to four A-BUS keypads.

Warning:
DO NOT connect A-BUS outputs to any computer or network connections (i.e. ethernet). It will cause damage to the computer or network components as 24-volt power runs on this same cable to power the amplifier stages of the amplifier module.

IR control: Another feature of the A-BUS system is the ability to control source equipment in another room where the A-BUS module is installed. If you wish to control another source from the receiver at the A-BUS keypad by remote control, connect A-BUS or another brands' IR emitter on the receiver's 40 K terminal. Then place the emitter on the remote receiver on the front panel.

Typically, the emitter will work when you connect with a 40 K connector. If it does not work, try a 56 K connector.

DC INPUT: Connect A-BUS power supply. Do not use any other AC Adapter on this connector as it may cause severe damage to the receiver.

9 SPEAKERS

Six terminals are provided for the front left, front right, front center, surround left, surround right, and surround back speakers. Speaker outputs are compatible with banana plug connectors.

Rear panel facilities

10 AC OUTLETS

The DTR-7.2 is supplied with AC mains outlets for connecting the power cords from other devices so that their power is supplied through the DTR-7.2. By doing this, you can use the Standby/On button on the DTR-7.2 to turn on and off the connected devices as well.

Caution:
Make sure that the total capacity of the other components connected to this unit does not exceed the capacity that is printed on the rear panel (e.g., 120 watts).

AC OUTLETS
AC 120V 60Hz
SWITCHED
TOTAL 120W 1A MAX.
11 AC INLET

Plug the supplied power cord into this AC INLET and then into the power outlet on the wall.

- Do not use a power cord other than the one supplied with the DTR-7.2. The power cord supplied is designed for use with the DTR-7.2 and should not be used with any other device.

- Never have the power cord disconnected from the DTR-7.2 while the other end is plugged into the wall outlet. Doing so may cause an electric shock. Always connect by plugging into the wall outlet last and disconnect by unplugging from the wall outlet first.

AC INLET

Power cord (supplied)

To an AC wall outlet
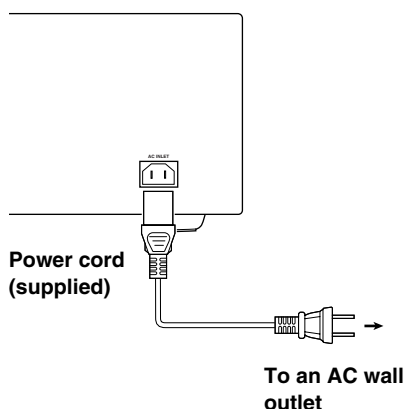

12 12V TRIGGER A/B/ZONE 2 terminal

These terminals are provided so that you can use the operation of the DTR-7.2 control the operation of another externally connected device. Connect the component to this 1/8-inch mini-jack terminal and when the set input source is selected, the device will turn on. Set the 12V TRIGGER terminal using the Setup menu: Input setup → 12V trigger (see page 40).
When the DTR-7.2 is in the ZONE 2 mode, this terminal outputs at 12 V/100 mA.

13 RI REMOTE CONTROL

The RI terminal on the DTR-7.2 is for connecting other Integra/Onkyo components equipped with the same RI terminal. When a component is RI-connected, you can point the remote controller supplied with the DTR-7.2 at the sensor on the DTR-7.2 and operate that component without having to switch remote controllers.
In addition, by connecting components to the RI terminal, you can also perform the system operations given below.

Power on/ready function

When the DTR-7.2 is in the standby state, if an RI-connected component is turned on, then the DTR-7.2 also turns on and the input source selected at the DTR-7.2 automatically switches to that component.
If the power cord for an RI-connected component is connected to the AC OUTLET on the DTR-7.2, or if the DTR-7.2 is turned on, this function will not work.

Direct change function

When the play button is pressed at an RI-connected component, the input source selected at the DTR-7.2 automatically changes to that component.

Power off function

When the DTR-7.2 is placed in the standby state, all RI-connected components are also automatically put into the standby state.

CAUTION:
If an MD recorder is connected to the TAPE jack on the DTR-7.2, switch the Input Selector from Tape to MD (see page 26).

DTR-7.2

RI connector

Ex: Integra/Onkyo CD player

RI connector

Ex: Onkyo cassette tape deck
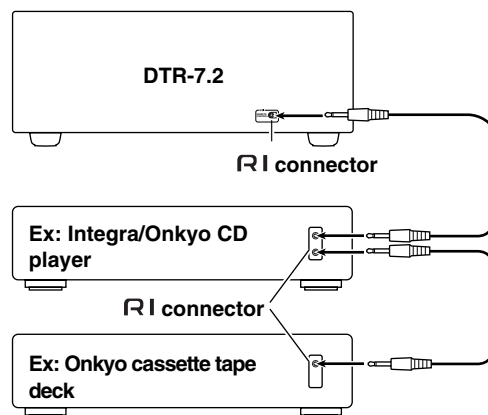

To connect components using the RI terminal, simply connect a remote control cable from this RI terminal to the RI terminal of the other component. An RI remote control cable with a 1/8-inch (3.5-mm) miniature two-conductor plug comes with every cassette tape deck, compact disc player, MD recorder, and DVD player that has an RI terminal.

- When performing operations with RI-connected components using the RI system, do not use the remote zone (Zone 2).

- For remote control operation, the audio connection cables must also be connected.

- If a component has two RI terminals, you can use either one to connect to the DTR-7.2. The other one can be used to daisy chain with another component.

- With Integra/Onkyo DVD players, you can enter the pre-program code so that you can operate the DVD player directly with the remote controller without connecting the RI terminals (see page 61).

14

Rear panel facilities

14   IR IN/OUT

If the DTR-7.2 is located inside a rack or cabinet that will not allow infrared beams to reach the IR sensor, you will need to connect a remote sensor to IR IN input to be able to use the remote controller. Then install the remote sensor in an unblocked location where you can easily point the remote controller.

Using a mini-jack connector, connect the IR emitter to the IR OUT terminal on the DTR-7.2 and then place the IR emitter on the remote sensor of the component or facing it.

15   RS 232

The RS 232 port is to be used in conjunction with an external controller to control the operation of the DTR-7.2 by using an external device.

16   VIDEO IN/OUT

These are the video inputs and outputs. On the rear panel, there are five video inputs and two video outputs and each one includes both composite video and S video configurations. Connect VCRs, LD players, DVD players, and other video components to the video inputs.

The two video output channels can be used to be connected to video tape recorders for making recordings.

- When connecting a VCR or other video component, make sure you connect the audio and video leads together (i.e., both to VIDEO 3).

- The Video 5 inputs are located on the front panel.

Composite video jack

S video jack
17   MULTI CHANNEL INPUT

By connecting a DVD player, MPEG decoder, or other component that has a multi channel port, you can playback the audio with 5.1-channel or 7.1-channel output. So be sure to prepare a cable that can properly connect the DTR-7.2 to the peripheral device. The signal input from SURR BACK R is output to the SURR BACK SPEAKER terminal.
18   GND

Use this GND terminal for connecting the ground (or earth) wire if a turntable is connected. Refer to "Connecting a turntable" on page 16.

Connections

Here is an explanation of how to connect the main components to the DTR-7.2 in the standard manner. There are many ways that any one component can be connected, and it is up to you to decide which method best fits your situation. The directions given here are only one option and should only be thought of as such. It is best to fully understand the nature of each connector and terminal as well as each of your components and their features to ascertain which method of connection is best.

2. CD player (CD)

Digital audio output (optical)

Connecting your audio components

Below is an example of how you can connect your audio components to the DTR-7.2. Refer to the diagram above for the following connection examples.

1. Connecting a turntable (PH)

Using an RCA-type audio connection cable, connect the output terminal on the turntable to the PH input jacks on the DTR-7.2. Make sure that you properly connect the left channel to the L jack and the right channel to the R jack.

Note:
The DTR-7.2 is designed for use with moving magnet cartridges. For proper operation, connect a ground (or earth) wire to the GND terminal. For some turntables, however, connecting the ground wire may cause increased noise, and in such a case, a ground wire is not necessary and should not be connected.

2. Connecting a compact disc player (CD)

Using an RCA-type audio connection cable, connect the output terminal on the compact disc player to the CD input jacks on the DTR-7.2. Make sure that you properly connect the left channel to the L jack and the right channel to the R jack.

If the compact disc player has a digital output jack as well, be sure to also connect it to either a DIGITAL INPUT (COAX) or DIGITAL INPUT (OPT) jack on the DTR-7.2 depending on the type of connector on the compact disc player.

With the initial settings of the DTR-7.2, the CD input source is set for digital input at the OPT 1 jack.
If the digital connection is made at a different jack, this must be changed at the Setup menu: Input Setup → Digital Setup (see page 34).

3. Connecting a cassette tape deck, MD recorder, DAT deck, or CD recorder (TAPE)

Using an RCA-type audio connection cable, connect the output terminals (PLAY) of the device to the TAPE IN jacks on the DTR-7.2 and the input terminals (REC) to the TAPE OUT jacks. Make sure that you properly connect the left channel to the L jack and the right channel to the R jack.

If the device has a digital output jack as well, be sure to also connect it to either a DIGITAL INPUT (COAX) or DIGITAL INPUT (OPT) jack on the DTR-7.2 depending on the type of connector on the device.

With the initial settings of the DTR-7.2, the TAPE input source is set for digital input at the OPT 2 jack.
If the digital connection is made at a different jack, this must be changed at the Setup menu: Input Setup → Digital Setup (see page 34).

Note:
The output from the DIGITAL OUTPUT jack of the DTR-7.2 is only the digital signal input to the DIGITAL INPUT jack.

P_R P_R

P_B P_B

Y   Y

Connecting your video components

Below is an example of how you can connect your video components to the DTR-7.2. Refer to the diagram above for the following connection examples.

The flow of the video signals is as follows:

- The signal that comes in from VIDEO IN is sent to VIDEO OUT and S VIDEO OUT.
- The signal that comes in from S VIDEO IN is sent to S VIDEO OUT and VIDEO OUT.
- The signal that comes in from COMPONENT VIDEO INPUT is only sent to COMPONENT VIDEO OUTPUT. When connecting a video player to the COMPONENT VIDEO INPUT terminals, be sure to connect your television to the COMPONENT VIDEO OUTPUT terminals.

Note:

If only the video connection for the MONITOR OUT is made, even if the input from each source component is through a component video connection, the picture will not appear. If only the S video connection for the MONITOR OUT is made, the picture will not appear.

4. Connecting a DVD player (DVD)

If the device is equipped with an S video output terminal, connect it to the DVD S VIDEO IN terminal with an S video cable. If it does not have an S video output terminal, connect its video output terminal to the DVD VIDEO IN terminal using an RCA-type video connection cable. You do not need to connect to both the DVD S VIDEO IN and DVD VIDEO IN terminals. If the device has component video outputs, connect them to one of the COMPONENT VIDEO INPUT jacks.

With the initial settings of the DTR-7.2, the DVD input source is set for the COMPONENT VIDEO INPUT 1 jack.

If the video connection is made at COMPONENT VIDEO INPUT 2, this must be changed at the Setup menu: Input Setup → Video Setup → Component Video (see page 36).

Using an RCA-type audio connection cable, connect the audio output terminal on the device to the audio DVD IN jacks on the DTR-7.2. Make sure that you properly connect the left channel to the L jack and the right channel to the R jack.

If the device has a digital output jack as well, be sure to also connect it to either a DIGITAL INPUT (COAX) or DIGITAL INPUT (OPT) jack on the DTR-7.2 depending on the type of connector on the DVD player.
17

Connections

With the initial settings of the DTR-7.2, the DVD input source is set for digital input at the COAX 1 jack.

If the digital connection is made at a different jack, this must be changed at the Setup menu: Input Setup → Digital Setup (see page 34).

5. Connecting a DVD recorder or other digital video recording device (VIDEO 2) (see page 17)

Using an RCA-type video connection cable, connect the video output terminal (composite) on the device to the VIDEO 2 IN jacks on the DTR-7.2 and video input terminal to the VIDEO 2 OUT jacks. If there is an S video input/output terminal on the device, connect it to the S VIDEO 2 IN/OUT jack using an S video cable. You do not need to connect to both the S VIDEO 2 IN and VIDEO 2 IN terminals. If the device has component video outputs, connect them to one of the COMPONENT VIDEO INPUT jacks.

With the initial settings of the DTR-7.2, the VIDEO 2 input source is set for the COMPONENT VIDEO INPUT 2 jack.

If the video connection is made at COMPONENT VIDEO INPUT 1, this must be changed at the Setup menu: Input Setup → Video Setup → Component Video (see page 36).

Using an RCA-type audio connection cable, connect the audio output terminal on the device to the same VIDEO 2 IN audio jacks on the DTR-7.2 and audio input terminal to the VIDEO 2 OUT audio jacks. Make sure that you properly connect the left channel to the L jack and the right channel to the R jack.

If the device has a digital output jack as well, be sure to also connect it to either a DIGITAL INPUT (COAX) or DIGITAL INPUT (OPT) jack on the DTR-7.2 depending on the type of connector on the device.

With the initial settings of the DTR-7.2, the VIDEO 2 input source is set for digital input at the COAX 3 jack.

If the digital connection is made at a different jack, this must be changed at the Setup menu: Input Setup → Digital Setup (see page 34).

If the device also has a digital input jack, it can be connected to the DIGITAL OUTPUT (OPT) jack on the DTR-7.2 for digital recording of the source for Rec Out at the DTR-7.2.

Note:
The output from the DIGITAL OUTPUT jack of the DTR-7.2 is only the digital signal input to the DIGITAL INPUT jack.

6. Connecting a video cassette recorder (VIDEO 1)

Using an RCA-type video connection cable, connect the video output terminal (composite) on the video cassette recorder to the VIDEO 1 IN jacks on the DTR-7.2 and video input terminal to the VIDEO 1 OUT jacks. If there is an S video input/output terminal on the video cassette recorder, connect it to the S VIDEO 1 IN/OUT jack using an S video cable. You do not need to connect to both the S VIDEO 1 IN and VIDEO 1 IN terminals. If the video cassette recorder has component video outputs, connect them to one of the COMPONENT VIDEO INPUT jacks.

With the initial settings of the DTR-7.2, the VIDEO 1 input source is set for the COMPONENT VIDEO INPUT 2 jack.

If the video connection is made at COMPONENT VIDEO INPUT 1, this must be changed at the Setup menu: Input Setup → Video Setup → Component Video (see page 36).

Using an RCA-type audio connection cable, connect the audio output terminal on the video cassette recorder to the same VIDEO 1 IN audio jacks on the DTR-7.2 and audio input terminal to the VIDEO 1 OUT audio jacks. Make sure that you properly connect the left channel to the L jack and the right channel to the R jack.

With the initial settings of the DTR-7.2, the VIDEO 1 input source is set for digital input at the COAX 2 jack.

If the digital connection is made at a different jack, this must be changed at the Setup menu: Input Setup → Digital Setup (see page 34).
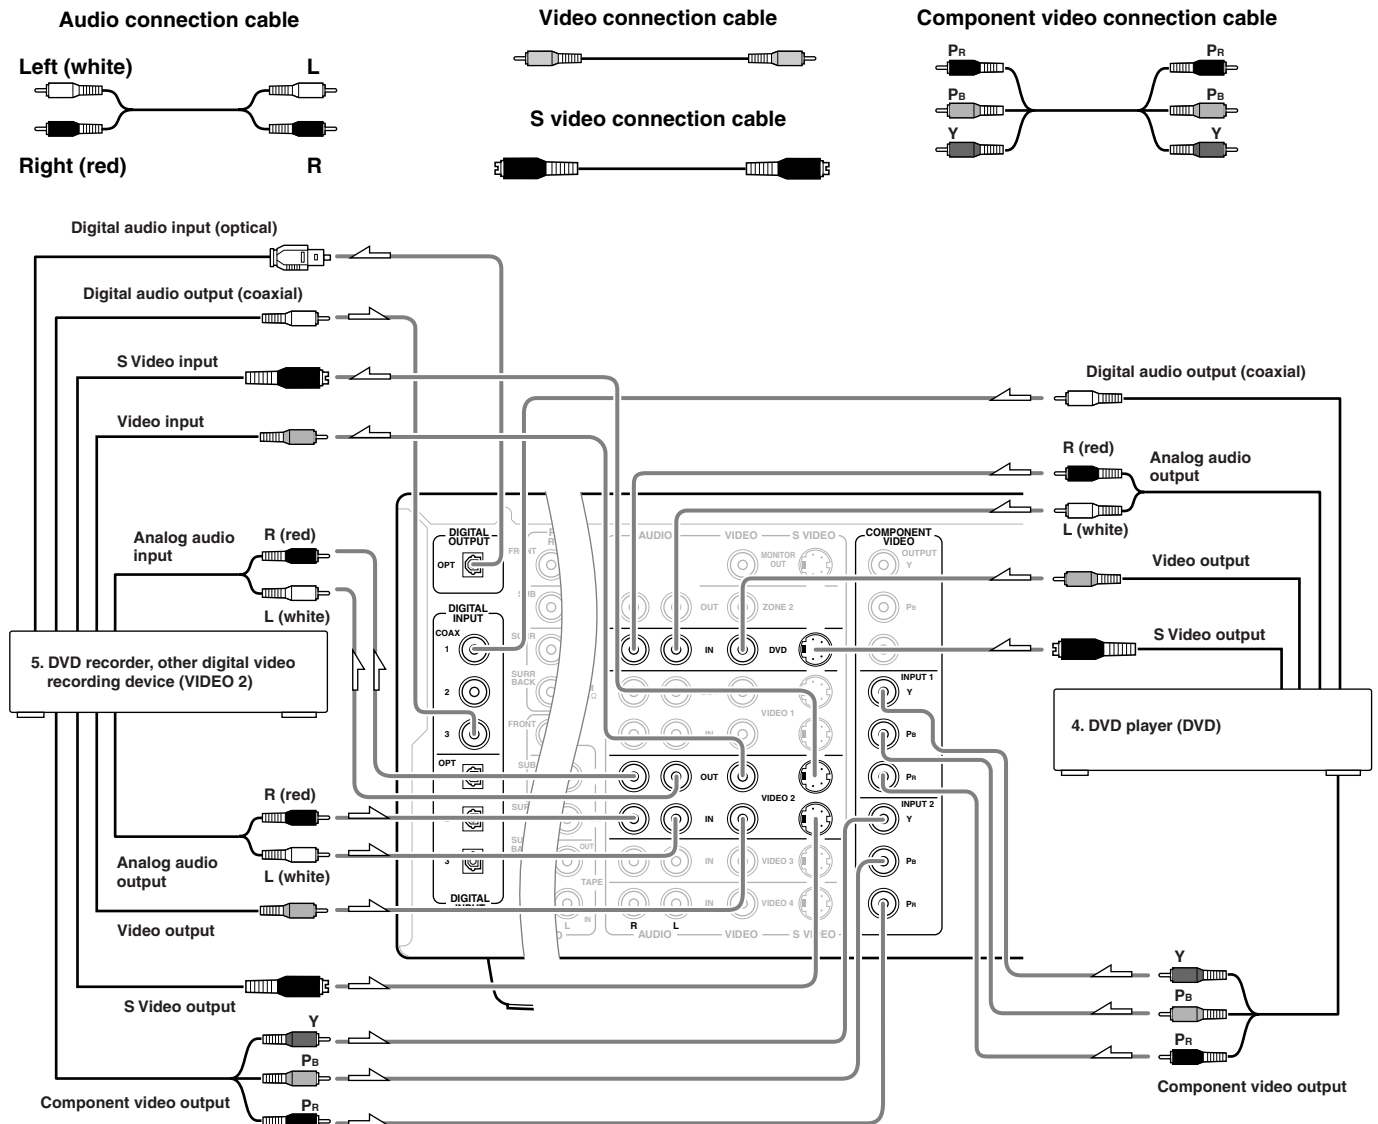

Connections
7, 8. Connecting a satellite tuner, television, or settop box (VIDEO 3 or 4)

If the satellite tuner or television is equipped with an S video output terminal, connect it to the S VIDEO 3 (or 4) IN terminal with an S video cable. If it does not have an S video output terminal, connect its video output terminal to the VIDEO 3 (or 4) IN terminal using an RCA-type video connection cable. You do not need to connect to both the S VIDEO 3 (or 4) IN and VIDEO 3 (or 4) IN terminals. If the satellite tuner or television has component video outputs, connect them to one of the COMPONENT VIDEO INPUT jacks.

With the initial settings of the DTR-7.2, the VIDEO 3 and VIDEO 4 input sources are set for the COMPONENT VIDEO INPUT 2 jack.

If the video connection is made at COMPONENT VIDEO INPUT 1, this must be changed at the Setup menu: Input Setup → Video Setup → Component Video (see page 36).

Using an RCA-type audio connection cable, connect the audio output terminal on the satellite tuner or television to the same VIDEO 3 (or 4) IN audio jacks on the DTR-7.2. Make sure that you properly connect the left channel to the L jack and the right channel to the R jack.

If the device has a digital output jack as well, be sure to also connect it to either a DIGITAL INPUT (COAX) or DIGITAL INPUT (OPT) jack on the DTR-7.2 depending on the device.

With the initial settings of the DTR-7.2, the VIDEO 3 input source is set for digital input at the OPT 3 jack.

If the digital connection is made at a different jack, this must be changed at the Setup menu: Input Setup → Digital Setup (see page 34).

With the initial settings of the DTR-7.2, nothing is allocated as the digital input source for VIDEO 4 (----).

If you connect a digital component to the VIDEO 4 terminal, be sure to make the appropriate settings in the Digital Setup sub-menu (see page 34).

9. Connecting a television monitor or projector (MONITOR OUT)

The DTR-7.2 is equipped with a simple Y/C separate circuit and simple Y/C mixed circuit. Since both the signal from the S VIDEO and VIDEO inputs are output to the MONITOR OUT S VIDEO output, if the television or projector is equipped with an S video input, it is unnecessary to connect the video connectors. If it is equipped with only a video input, connect it to the MONITOR OUT VIDEO output.

If the monitor or projector is equipped with an S video output terminal, connect it to the MONITOR OUT S VIDEO terminal with an S video cable. If it does not have an S video output terminal, connect its video output terminal to the MONITOR OUT VIDEO terminal using an RCA-type video connection cable. You do not need to connect to both the MONITOR OUT S VIDEO and MONITOR OUT VIDEO terminals. If the device has component video inputs, connect them to the COMPONENT VIDEO OUTPUT jacks.

Note:
Note that the Setup menu will only be displayed on the monitor connected to MONITOR OUT and not those connected to the COMPONENT VIDEO OUTPUT jacks.

10. Connecting video camera, etc. (Video 5/Video Cam Input)

If the device is equipped with an S video output terminal, connect it to the S Video 5 input terminal with an S video cable. If it does not have an S video output terminal, connect its video output terminal to the Video 5 input terminal using an RCA-type video connection cable. You do not need to connect to both the S Video 5 input and Video 5 input terminals.
The Video 5 digital input is fixed to the Digital input on the front panel.

19
Connecting speakers

Before connecting the speakers, place them correctly by consulting the instruction manuals that came with them.
For surround playback, the configuration and placement of your speakers are very important.

For THX surround EX playback, we recommend that you use a THX speaker system that is certified by Lucasfilm Ltd.

Ideal speaker configuration

- **Front right and left speakers**
- **Center speaker**

  Produces a rich sound image by serving as a sound source for the front right and left speakers and enhancing the sonic movement.

- **Surround right and left speakers**

  Adds three-dimensional sonic movement and produces environmental sound associated with the background and effect sound for each scene.

- **Surround back speaker**

  Required for enjoying THX Surround EX, DTS-ES Matrix 6.1, or DTS-ES Discrete 6.1 audio. For audio using surround back right and surround back left speakers, a separately-sold 2-channel power amplifier is required.

  Lucasfilm/THX recommends the use of two Surround Back speakers to enjoy the full potential of THX Surround EX. An external stereo power amplifier will need to be used to power the two speakers from the Pre-Amp out terminals.

  However, if you are unable to position two speakers in your listening environment, a single surround speaker can be used and the DTR-7.2 has an internal amplifier to power this speaker for your convenience.

- **Subwoofer**

  Produces powerful and heavy bass.

Minimum speaker configuration for surround sound playback

- **Front right and left speakers**
- **Surround right and left speakers**

The sound recorded for the center speaker and the subwoofer will be properly distributed to the front right and left speakers for optimized surround playback.

Speaker placement

Ideal speaker placement varies depending on the size of your room and the wall coverings. Here, only typical example of speaker placement and recommendations are shown.
In order to create the optimum conditions for the best sound quality, be sure to place all the speakers so that the greatest difference between the distances of each speaker to the listening position is less than 20 feet (6 meters).

Important points regarding speaker placement

Front left and right speakers and center speaker
- Place these three speakers at the same height from the floor.
- Place each speaker so that sound is aimed at the location of the listener's ears when at the listening position.

Surround left and right speakers
- Place these speakers so that their height is 3 feet (1 meter) higher than that of the listener's ears.

Surround back speaker/Surround back left and right speakers
- Place these speakers behind the listener so that the angle between each speaker and the listener is approximately 15 degrees.
- Place these speakers so that their height is 3 feet (1 meter) higher than that of the listener's ears.

Note:
For audio using surround back right and surround back left speakers, a separately-sold 2-channel power amplifier is required.
(Only one surround back speaker) **(Two surround back speakers)**
Subwoofer
A subwoofer is recommended for the highest bass effect.

(Only one surround back speaker)
(Two surround back speakers)

Layout with dipolar speakers **Layout with monopolar speakers**
1	TV or screen	8
2	Front left speaker	
3	Subwoofer	
4	Center speaker	
5	Front right speaker	9
6	Surround left speaker	
7	Surround right speaker	10
1 TV or screen
2 Front left speaker
3 Subwoofer
4 Center speaker
5 Front right speaker
6 Surround left speaker
7 Surround right speaker
8 Surround back left speaker or Surround back speaker (only one surrround back speaker)
9 Surround back right speaker
10 Listening position

Most dipoles have an arrow on them to indicate their orientation towards the screen. So for the side dipoles, the arrows point forward. For the back dipoles, the arrows should point towards each other to achieve the correct acoustical phasing in the room.

Connecting speakers

Connecting speakers

Caution:
Connect only speakers with an impedance between 4 and 16 Ω to the DTR-7.2. If the impedance of even one speaker is between 4 and 6 Ω, be sure to set the speaker impedance setting accordingly (see page 29).

Notes:

• When you are using only one speaker or when you wish to listen to monaural (mono) sound, a single speaker should never be connected in parallel to both the right and left-channel terminals simultaneously.
• To prevent damage to circuitry, never short-circuit the positive (+) and negative (–) speaker wire.
• Be sure to connect the positive and negative cables for the speakers properly. If they are mixed up, the left and right signals will be reversed and the audio will sound unnatural.

• Do not connect more than one speaker cable to one speaker terminal. Doing so may damage the DTR-7.2.

• Connect your surround back speaker to the SURR BACK SPEAKER terminals (see this page).

Connecting the speaker cable

1. **Strip away 5/8 inch (15 mm) of wire insulation.**

2. **Twist wire ends very tight.**

3. **Unscrew**

4. **Insert wire**

5. **Screw**
Connecting a subwoofer

Use the PRE OUT SUBWOOFER jack to connect a subwoofer with a built-in power amplifier. If your subwoofer does not have a built-in amplifier, connect an amplifier to the PRE OUT SUBWOOFER jack and the subwoofer to the amplifier.
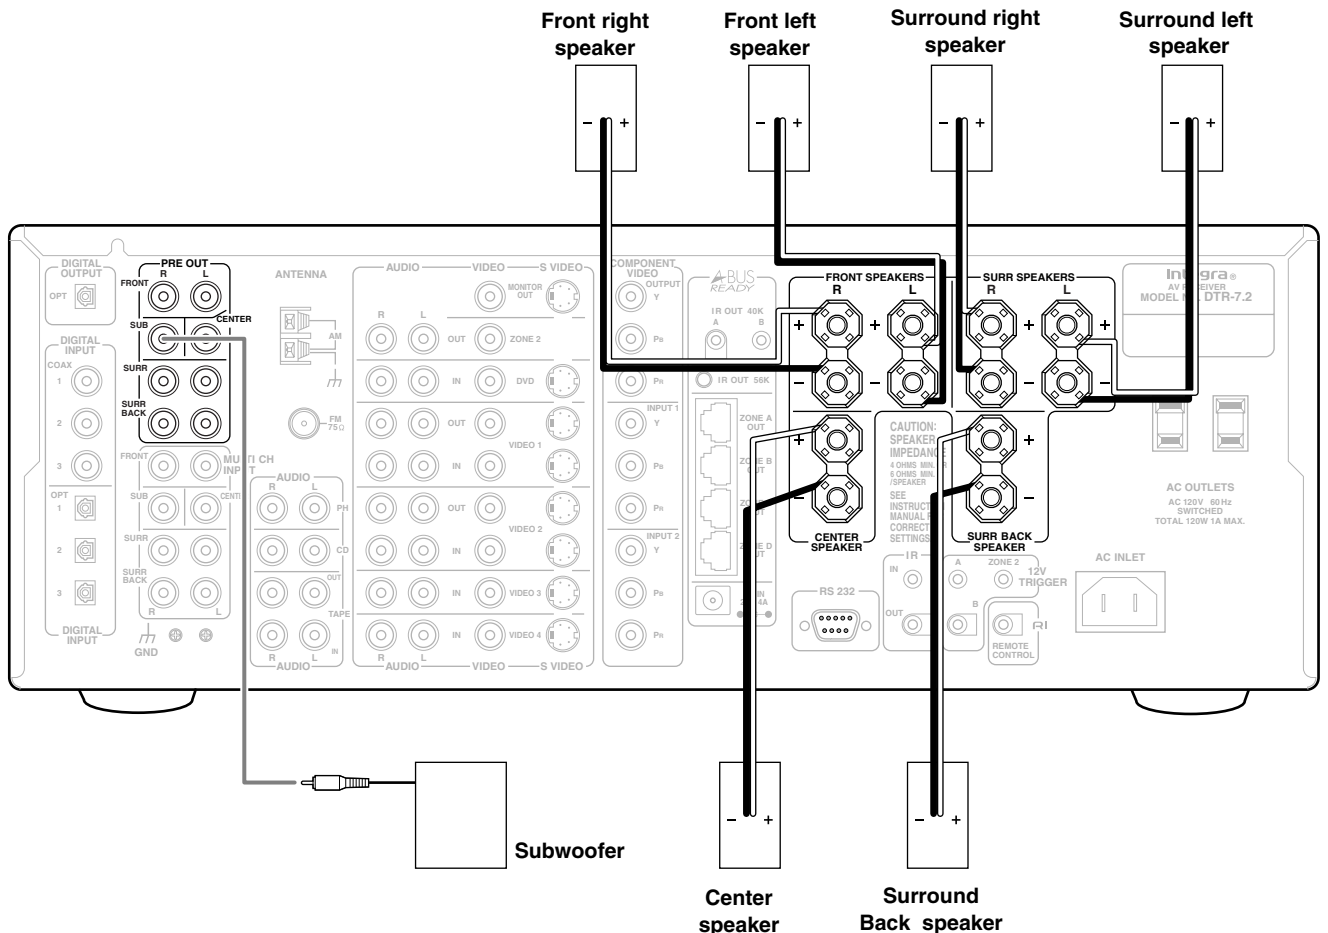

Connecting antennas

To use the tuner of DTR-7.2, it is necessary to prepare the supplied FM and AM antennas.

- Adjustment and placement of the FM and AM antennas for better reception must be done while listening to a station broadcast.

- If better reception cannot be obtained, then placement of an outside antenna is recommended.

Assembling the AM loop antenna

Assemble the loop antenna as shown in the illustration.

- Refer to "Connecting the AM loop antenna" below for details on connecting the loop antenna.
Insert into the hole.

Connecting the AM antenna cable

1. **Press down the lever.**

2. **Insert the wire into the hole.**

3. **Release the lever.**
Connecting the included antennas

Connecting the FM indoor antenna:
The FM indoor antenna is for indoor use only. During use, extend the antenna and move it in various directions until the clearest signal is received. Fix it with push pins or similar implements in the position that will cause the least amount of distortion.
If the reception is not very clear with the attached FM indoor antenna, the use of an outdoor antenna is recommended.

Connecting the AM loop antenna:
The AM loop antenna is for indoor use only. Set it in the direction and position where you receive the clearest sound. Put it as far away as possible from the DTR-7.2, televisions, speaker cables, and power cords.
When reception is not satisfactory with the attached AM loop antenna alone, connection of an outdoor antenna is recommended.
Strip away the insulation from the end of the cable, then fully insert the stripped end of the cable.

Hint:
Either of the split ends of the AM antenna can be connected to either terminal. Unlike speaker cabling, there is no polarity for AM broadcast signals.

Connecting antennas

Connecting an FM outdoor antenna

Please make sure that you follow the considerations:

- Keep the antenna away from noise sources (neon signs, busy roads, etc.).
- It is dangerous to put the antenna close to power lines. Keep it well away from power lines, transformers, etc.
- To avoid the risk of lightning and electrical shock, grounding is necessary. Follow item 14 of the "Important Safeguards" on page 2 when you install the outdoor antenna.

Connecting an AM outdoor antenna

An outdoor antenna will be more effective if it is stretched horizontally above a window or outside.

- Do not remove the AM loop antenna.
- To avoid the risk of lightning and electrical shock, grounding is necessary. Follow item 14 of the "Important Safeguards" on page 2 when you install the outdoor antenna.

Directional linkage

Do not use the same antenna for both FM and TV (or VCR) reception since the FM and TV (or VCR) signals can interfere with each other. If you must use a common FM/TV (or VCR) antenna, use a directional linkage type splitter.

To receiver   **To TV (or VCR)**

23
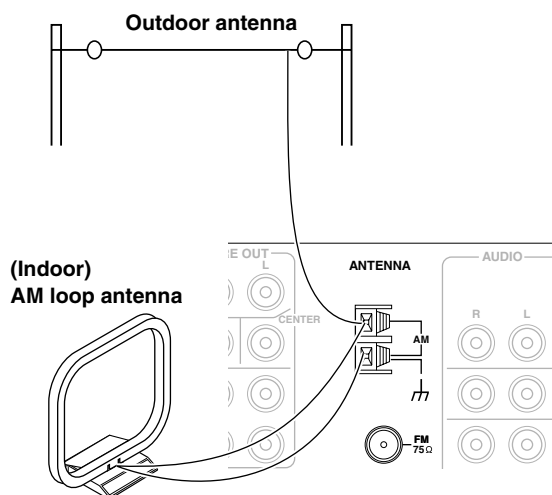

Connecting the remote zone (Zone 2) speakers

The DTR-7.2 allows you to connect another set of speakers and place them in a different room or separated area for listening to music. This other room or area is referred to as the remote zone (Zone 2), while the room where the DTR-7.2 is located is the main zone. In addition, the IR IN/OUT allows you to control the DTR-7.2 from the remote zone (Zone 2) with the remote controller even though the remote zone is physically separated. The diagram below shows how to make the proper connections for the remote zone.

When using the ZONE 2 OUT terminals

The ZONE 2 OUT terminal is a constant output. Connect to the LINE input of the amplifier (CD, tape, etc.). Adjust the volume with the amplifier connected to the ZONE 2 OUT terminal.

1. **Connect the DTR-7.2 to the amplifier for the remote zone.**

2. **Connect the remote zone speaker cables to the speaker terminals on the amplifier.**
   Adjust the volume level at the amplifier.

3. **Connect the DTR-7.2 to the monitor for the remote zone.**
Operating components not reached by the remote controller signals (IR IN/OUT)

The following equipment (sold separately) is essential for operation:

• Onkyo's Multi-Room System kits (IR Remote Controller Extension System), or

• Multiroom A/V distribution and control systems from Niles® and Xantech® to name a few.

If the remote controller signal does not reach the DTR-7.2 remote sensor

If the DTR-7.2 is located inside a cabinet or other enclosure where the infrared rays from the remote controller cannot enter, then operation with the remote controller will not be possible. In such a case, it will be necessary to install a remote sensor at a location outside of the cabinet for the infrared rays from the controller to reach.

With this connection, select "Main" for the Hardware Setup → IR IN Setup → Position setting in the Setup menu (see page 29).
The IR IN input allows you to control the DTR-7.2 from the remote zone (Zone 2) with the remote controller even though the remote zone is physically separated. The diagram below shows how to make the proper connections for the remote zone.
With this connection, select "Zone 2" for the Hardware Setup → IR IN Setup → Position setting in the Setup menu (see page 29).
Make connection as shown below. Do not plug the equipment into the power source until the connection is complete.
If the remote controller signal does not reach other components

In this situation, you will need to use a commercially available IR emitter. Connect the mini plug of the IR emitter to the IR OUT terminal on the DTR-7.2 and then place the IR emitter on the remote sensor of the component or facing it. When the IR emitter is connected, only the signal input to the IR IN terminal is output to the IR OUT terminal. The signal input from the remote sensor on the front of the DTR-7.2 will not be output to the IR OUT terminal.

Connecting the power

Standby/On

Standby indicator

Tape

To wall outlet

Power

ON — **STDBY**
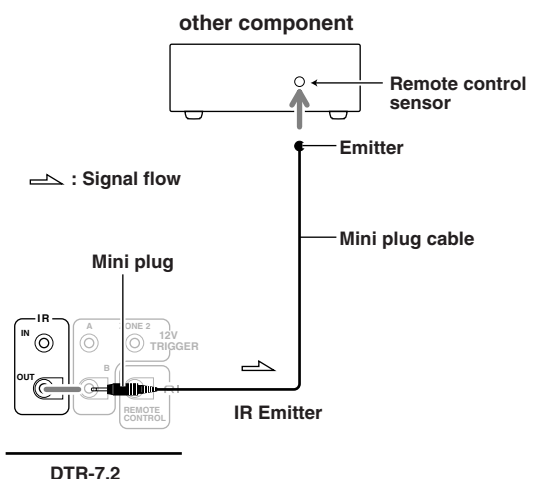

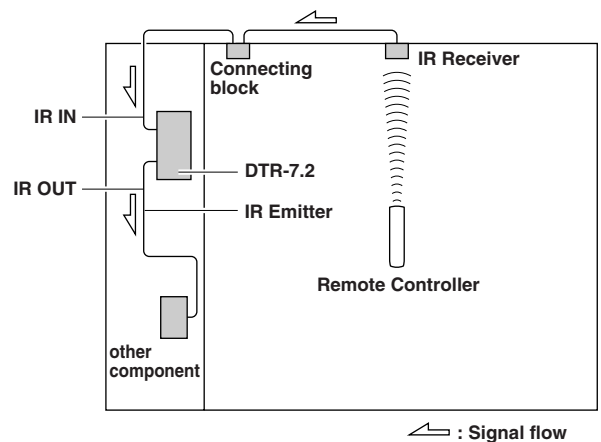

RCVR
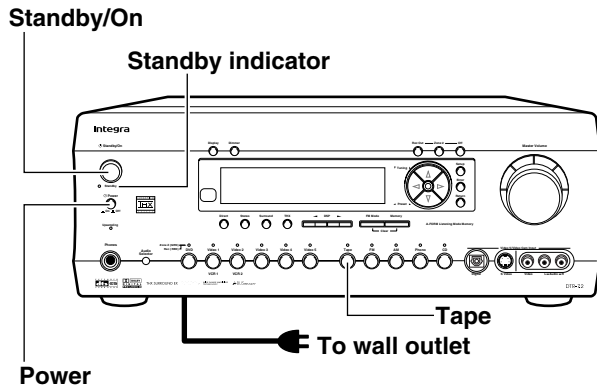

- The DTR-7.2 is shipped with the main power (Power) switch in the on position (ON). When the power cord is plugged in for the first time, the DTR-7.2 will automatically enter the standby state and the Standby indicator will light (same condition after step 2 below).

- Before you plug in the DTR-7.2, confirm that all connections have been made properly.

- Turning on the power may cause a momentary power surge, which might interfere with other electrical equipment on the same circuit, such as computers. If this happens, use a wall outlet on a different circuit.

1. Plug the power cord into an AC wall outlet.

2. Press the Power switch to set the DTR-7.2 to standby state.

The Standby indicator will light up.

Standby
Power
On Off
3. Press the Standby/On button to turn on the DTR-7.2. The display and four jog dial indicators will light up and the Standby indicator will turn off.

If you press the Standby/On button again, the receiver returns to Standby mode.

Standby/On

Standby

Turn off
Turning the power on from the remote controller:

Before you can use the remote controller, you must perform steps 1 and 2 above and place the DTR-7.2 in the standby state.

1. Press the RCVR MODE button.

The RCVR MODE button lights green.

RCVR   CD
2. Press the ON button to turn on the DTR-7.2 (take it out of the standby state).

To return the DTR-7.2 to the standby state, press the STDBY button.

ON   STDBY

To change the display of the input source from TAPE to MD:

If you connected an MD recorder to the TAPE jack on the DTR-7.2, you can have "MD" appear when the Tape source button is pressed. By changing the display, if an Onkyo MD recorder ꓤI-connected, the ꓤI system functions will become enabled.

Changing the display:

Press and hold down the Tape source button until the display changes from TAPE to MD (approx. 3 seconds).

TAPE

MD

Tape

To return the display to its original setting, perform the same procedure. This setting is necessary to allow ꓤI system functions for the connected cassette tape or MD recorder.

Memory preservation

This unit does not require memory preservation batteries. A built-in memory power backup system preserves the contents of the memory during power failures and even when the Power switch is set to off. The Power switch must be set to on in order to charge the backup system.

The memory preservation period after the unit has been turned off varies depending on climate and placement of the unit. On the average, memory contents are protected over a period of a few weeks after the last time the unit has been turned off. This period is shorter when the unit is exposed to a highly humid climate.

26

Setup menus

When making the various settings required to configure your DTR-7.2 optimally, you can either use the OSD menu that appears on your television monitor or you can use the display on the front of the DTR-7.2. The OSD menu is a settings menu that is displayed on your TV monitor. For use as reference when performing the setting procedures, this manual shows both the OSD menu displayed on your television monitor and the display on the front of the DTR-7.2.
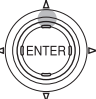

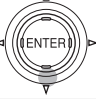

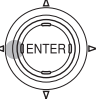

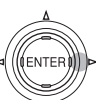

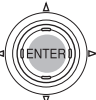

The Setup menu consists of a main screen that is divided up into 5 menus: Hardware Setup, Speaker Setup, Input Setup, Audio Adjust, and Preference. These menus are then divided up into various sub-menus, and these contain settings for you to optimize your home theater as you wish.

```

Sub-menu

Navigating through the Setup menu

You can change settings using the buttons on the front panel and on the remote controller.

The buttons on the remote controller correspond to those on the DTR-7.2 as shown below.

Button on remote controller	Button on DTR-7.2
SETUP — SETUP	Setup — Setup
(upper edge of ENTER button)	△ UP
(lower edge of ENTER button)	▽ DOWN
(left edge of ENTER button)	◁ LEFT
(right edge of ENTER button)	▷ RIGHT
ENTER — ENTER	Enter — Enter
RETURN — RETURN	Return — Return

1. **Press the SETUP button.**
   The main menu screen of the Main menu appears on your TV monitor.

2. **Using the ▲ and ▼ cursor buttons, select the menu that you want to enter.**

3. **Press the ENTER button to enter the selected menu.**
   The screen for that menu appears.

4. **Using the ▲ and ▼ cursor buttons, select the sub-menu that you want to enter, and press the ENTER button.**

   Each sub-menu has different settings that can be changed as desired, and they are all explained below. To change a setting, first select it using the ▲ and ▼ cursor buttons, and then change the setting using the ◄ and ► cursor buttons.

5. **Press the RETURN button to set the new settings and return to the previous menu screen, and again to return to the main screen.**

Note:
Press the SETUP button to exit the Setup menu immediately.

Setup menus

Basic Menu

Your DTR-7.2 is provided with a Basic Setup Menu for those who are not familiar with many of the advanced settings of an AV receiver or those who wish to watch movies and listen to music with the minimal amount of setup. With the Basic Setup Menu, the settings that rarely need to be set or that are not needed for a reasonably good degree of sound quality are not displayed. Settings listed with Ⓑ next to their name are settings that can be set using the Basic Setup Menu.

```
=Basic Menu
0.Hardware Setup
1.Speaker Setup
2.Input Setup
3.Audio Adjust

        →Advanced Menu

(▲)(▼)|ENTER|Quit:|SETUP|
```

Note:

Once you set the Speaker Impedance setting at the Hardware Setup menu, the setting will not be displayed again when you enter the Basic Menu.

Advanced Menu

The Advanced Menu provides an Advanced Setup Menu with features such as the Listening Mode Presets that allow you to customize the output sound for movies and music just the way you like and the AV Sync Setup that allows you to adjust for discrepancies between the video and audio timing.
Hardware Setup

0. Hardware Setup menu

```
=Advanced Menu=======

0.Hardware Setup
_____

 1.Speaker Impedance
 2.IR IN Setup

     ▲▼|ENTER|Quit:|SETUP|
```
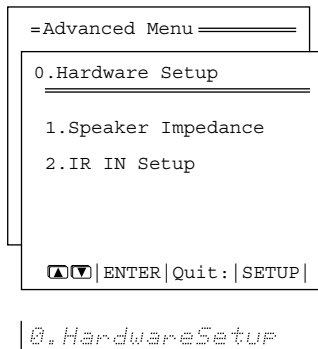

0.HardwareSetup

The Hardware Setup menu will need to be set before you use your DTR-7.2 for the first time. Once you set the Speaker Impedance setting at the Hardware Setup menu, the setting will not be displayed again when you enter the Basic Menu. To change the setting at a later date, select the Advanced Menu to display the Hardware Setup menu.

0-1. Speaker Impedance sub-menu Ⓑ

Set the impedance level to match the specifications of the speakers you are using.

If the impedances of all speakers are between 6 and 16 Ω, select "6 ohms." If the impedance of even one speaker is between 4 and 6 Ω, select "4 ohms."

Note:

Before you change this setting, be sure to first lower the volume at the DTR-7.2 to the minimum level.

```

```
IR IN Setup?
This sub-menu allows you to set where you will be using the remote controller when you are using it in conjunction with the IR IN terminal (i.e. remote controller signals are input at the IR IN terminal).

Main: Select when you have a remote sensor for the remote controller connected to the IR IN terminal in the main room.

Zone 2: Select to perform the remote zone (Zone 2) operations from the remote zone. When this is selected, the ON/STDBY, INPUT SELECTOR, and CH +/= buttons work without having to press the ZONE 2 button on the remote controller.

Speaker Setup

1. Speaker Setup menu

After you have installed the DTR-7.2, connected all the components, and determined the speaker layout, it is now time to perform the settings in the Speaker Setup menu for the optimum sound acoustics for your environment and speaker layout.

Before you perform the following settings, it is important that you first determine the following characteristics:

- The types and sizes of the speakers that are connected.
- The distance from each speaker to your normal listening position.

(Only one surround back speaker)

```

1.Speaker Setup

Memo:
(Only one surround back speaker)
(Two surround back speakers)
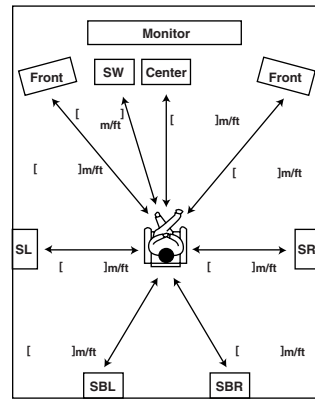

Tip:

When setting the speaker size in the Speaker Config sub-menu, use the guidelines given below.

Large: The complete frequency range for the channel you are setting will be output from the speaker.

Small: Frequencies of the channel you are setting lower than 80 Hz will be output from the subwoofer. If there is no subwoofer, then the output will be from the left and right front speakers. (Set all speakers for THX speaker systems to "Small.")

1-1. Speaker Config sub-menu Ⓑ

Here you will enter which speakers are connected and the size of each speaker.

```
=Advanced Menu=========

1.Speaker Setup
_____
1-1.Speaker Config

  f.Surr Back Out :1ch [◀][▶]

[▲][▼]       Quit:|SETUP|
```
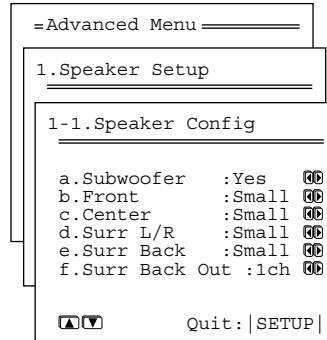

Speaker Config?

a. Subwoofer

　Yes: Select when a subwoofer is connected.

　No: Select when a subwoofer is not connected.

b. Front

　Large: Select if the front speakers are large sized.

　Small: Select if the front speakers are small sized.

- If "No" is selected for the Subwoofer setting, then this setting is fixed to "Large."

c. Center

　None: Select if no center speaker is connected.

　Large: Select if the center speaker is large sized.

　Small: Select if the center speaker is small sized.

- If "Small" is selected for the Front setting, then "Large" cannot be selected for this setting.

d. Surround L/R

　None: Select if no surround left and right speakers are connected.

　Large: Select if the surround left and right speakers are large sized.

　Small: Select if the surround left and right speakers are small sized.

- If "Small" is selected for the Front setting, then "Large" cannot be selected for this setting.

e. Surround Bk

　None: Select if no surround back left and right speakers are connected.

　Large: Select if the surround back left and right speakers are large sized.

　Small: Select if the surround back left and right speakers are small sized.

- If "None" is selected for the Surround L/R setting, the display disappears from the screen.
- If "Small" is selected for the Surround L/R setting, then "Large" cannot be selected for this setting.

f. Surr Back Out

　1ch: Select if there is only one surround back speaker.

　2ch (PREOUT only): Select if there are two surround back speakers. (For preout output only.)

Speaker Setup

1-2. Speaker Distance sub-menu Ⓑ

Here you will enter the distance from each speaker to your normal listening position. This is important for the timing of the acoustics to create the proper sound space that the DTR-7.2 and today's sound systems are able to produce.

Notes:

• Speakers that you selected "No" or "None" for in the Speaker Config sub-menu will not appear.

• The difference between the distances of different speakers cannot be set to more than 20 feet (6 meters).

(Only one surround back speaker)

```

```
Sp Distance?
```
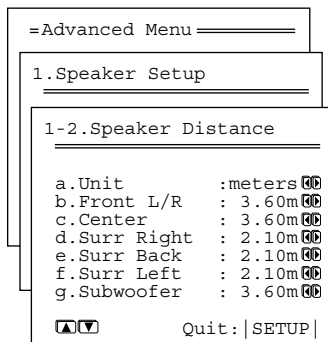

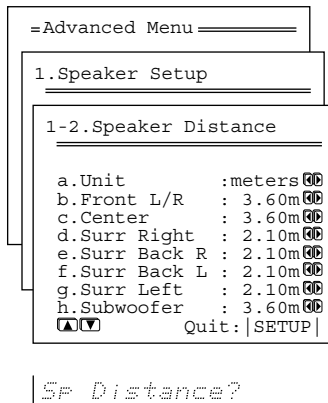

a. Unit

feet: Select if you will enter the distances in feet.

meters: Select if you will enter the distances in meters.

b. Front L/R

Set the distance from the front left and right speakers to your normal listening position between 1 and 30 feet in 0.5-feet intervals (0.3 to 9 meters in 0.15-meter intervals).

Position the front left and right speakers so that they are the same distance from the listener. If they are not, you may lose the center position for stereo sound.

c. Center

Set the distance from the center speaker to your normal listening position between 1 and 30 feet in 0.5-feet intervals (0.3 to 9 meters in 0.15-meter intervals).

d. Surr Right

Set the distance from the surround right speaker to your normal listening position between 1 and 30 feet in 0.5-feet intervals (0.3 to 9 meters in 0.15-meter intervals).

e. Surr Back

Set the distance from the surround back speaker to your normal listening position between 1 and 30 feet in 0.5-feet intervals (0.3 to 9 meters in 0.15-meter intervals).

• This setting appears if set for one surround back speaker in the Speaker Config sub-menu.

f. Surr Left

Set the distance from the surround left speaker to your normal listening position between 1 and 30 feet in 0.5-feet intervals (0.3 to 9 meters in 0.15-meter intervals).

g. Subwoofer

Set the distance from the subwoofer to your normal listening position between 1 and 30 feet in 0.5-feet intervals (0.3 to 9 meters in 0.15-meter intervals).

e. Surr Back R

Set the distance from the surround back right speaker to your normal listening position between 1 and 30 feet in 0.5-feet intervals (0.3 to 9 meters in 0.15-meter intervals).

• This setting appears if set for two surround back speakers in the Speaker Config sub-menu.

f. Surr Back L

Set the distance from the surround back left speaker to your normal listening position between 1 and 30 feet in 0.5-feet intervals (0.3 to 9 meters in 0.15-meter intervals).

• This setting appears if set for two surround back speakers in the Speaker Config sub-menu.

Note:

For audio using surround back right and surround back left speakers, a separately-sold 2-channel power amplifier is required.

Speaker Setup

1-3. Level Calibration sub-menu Ⓑ

Here you will set the volume for each speaker so that they are all heard by the listener at the same level. This is especially important for speaker layouts where the left and right speakers are at different distances or in asymmetrical positions due to room designs and configurations. These settings and the distance settings performed above are vital to create the proper acoustics required for the optimum sound space and dynamics.

Notes:

- **Be aware that when you enter this sub menu, a loud white noise is output.**
- The speaker level settings here are not effective for multi-channel input sources. To adjust the speaker levels for multi-channel input sources, you will need to use the CH SEL, LEVEL ▲ , and LEVEL ▼ buttons on the RC-461M remote controller. See page 52.

│Level Cal?
```
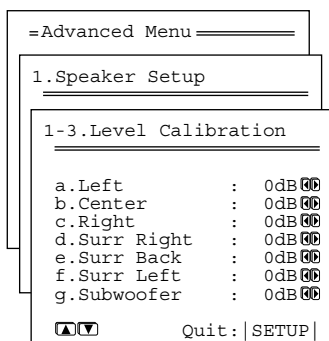

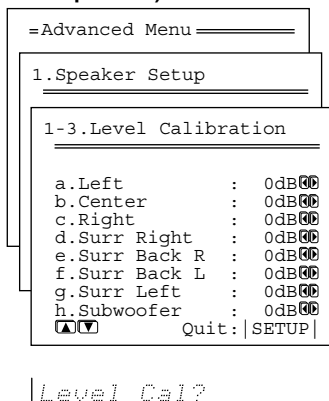

Calibrating the speaker levels

(1)
When this sub-menu is entered, the DTR-7.2 will emit a pink noise from the front left speaker. At this time, the Master volume automatically increases to the reference level (0dB). Remember the level of this noise and then press the ▼ cursor button. (Note that this can be adjusted to any level between –12 and 12 decibels in 1-decibel intervals.) The DTR-7.2 will now emit the pink noise from the center speaker.

(2)
Using the ◀ and ▶ cursor buttons, adjust the volume level of the noise from the center speaker so that it is the same level as the front left speaker. You can jog back and forth between the speakers to help you compare the volume levels.

(3)
Press the ▼ cursor button again. The DTR-7.2 will now emit the pink noise from the front right speaker.

32

Notes:

- Speakers that you selected "No" or "None" for in the Speaker Config sub-menu will not appear.
- To accurately set the output levels, it is recommended to use a handheld sound pressure level (SPL) meter. Set the meter to C-weighting and slow averaging. A Radio Shack® SPL meter or equivalent is recommended. Using the internal channel noise generators, set each channel so that you read a 75 decibel sound pressure level.

a. Left
Sound comes from the front left speaker. Adjust the sound level between –12 and 12 decibels in 1-decibel intervals.

b. Center
Sound comes from the center speaker. Adjust the sound level between –12 and 12 decibels in 1-decibel intervals.

c. Right
Sound comes from the front right speaker. Adjust the sound level between –12 and 12 decibels in 1-decibel intervals.

d. Surr Right
Sound comes from the surround right speaker. Adjust the sound level between –12 and 12 decibels in 1-decibel intervals.

e. Surr Back
Sound comes from the surround back speaker. Adjust the sound level between –12 and 12 decibels in 1-decibel intervals.

- This setting appears if set for one surround back speaker in the Speaker Config sub-menu.

f. Surr Left
Sound comes from the surround left speaker. Adjust the sound level between –12 and 12 decibels in 1-decibel intervals.

g. Subwoofer
Sound comes from the subwoofer. Adjust the sound level between –15 and 12 decibels in 1-decibel intervals.

e. Surr Back R
Sound comes from the surround back right speaker. Adjust the sound level between –12 and 12 decibels in 1-decibel intervals.

- This setting appears if set for two surround back speakers in the Speaker Config sub-menu.

f. Surr Back L
Sound comes from the surround back left speaker. Adjust the sound level between –12 and 12 decibels in 1-decibel intervals.

- This setting appears if set for two surround back speakers in the Speaker Config sub-menu.

Note:
For audio using surround back right and surround back left speakers, a separately-sold 2-channel power amplifier is required.

Speaker Setup

1-4. Bass Peak Level (Bass Peak Level Manager*) sub-menu

Setting the bass peak level is important to keep your subwoofer from being damaged by preventing it from outputting over a set volume. If your subwoofer has a built-in limiter, set this setting to "Off."

Note:
If your system does not include a subwoofer, this setting will set the bass peak level for your front speakers.

```
=Advanced Menu ========
 1.Speaker Setup
  1-4.Bass Peak Level
   a.Bass Peak Level
           Limiter :Off◀▶

              Quit:|SETUP|
```

```
Bass Peak Lvl?
```
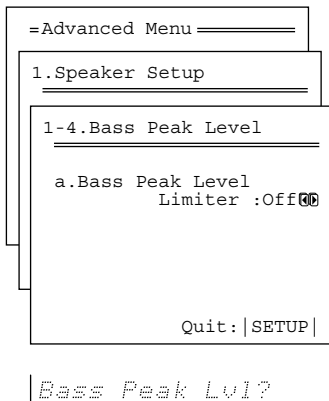

a. Bass Peak Level Limiter

On: Select to set the bass peak level. When "On" is selected, the Peak Level setting appears below.

Off: Select to turn off the bass peak level limiting function.

```
=Advanced Menu ========
 1.Speaker Setup
  1-4.Bass Peak Level

   a.Bass Peak Level
           Limiter :On ◀▶

   b.Peak Level   :+18dB ▶

      Press ▶ to set
      Peak Level.
   ▲▼         Quit:|SETUP|
```

```
BassLimiter:On
```
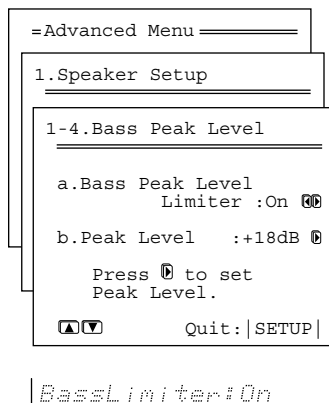

b. Peak Level

The current bass peak level is displayed. Press the ► cursor button to output a test sound. Then press the ► cursor button (or turn the Master Volume dial) to slowly raise the volume to the point where the sound becomes distorted and then back it off until it returns to normal. This is the proper setting for the bass peak level.

After setting the Peak Level at the Bass Peak Level sub-menu, press the RETURN button. The values are set and the previous screen appears.

```
=Advanced Menu ========
 1.Speaker Setup
  1-4.Bass Peak Level

   b.Peak Level   :-27dB◀▶
    1.Turn Volume up.
    2.Press RETURN just
      before sound is
      distorted.
```

```
BassPeakLvl:-27
```
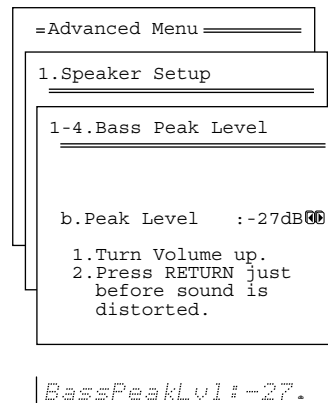

Notes:

• The volume can be adjusted to either –∞ or between –81 to +18 decibels in 1-decibel increments.

• Do not allow the distorted sound to be output from the subwoofer for a long time for it may damage the subwoofer.

* Bass Peak Level Manager is a registered trademark of Lucasfilm Ltd.

Input Setup

2. Input Setup menu

This menu allows you to setup the various input sources available with the DTR-7.2. Each input source may have a great number of settings that are difficult to keep track of, so we recommend making a chart to record what you have set and for which component to prevent confusion later.

```
=Advanced Menu
 2.Input Setup

   ▲▼        Quit:|SETUP|
```

```
Digital Setup?
```
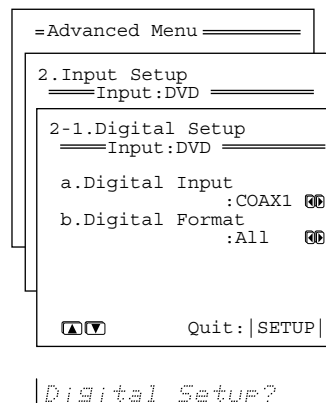

a. Digital Input

This setting tells the DTR-7.2 which input source button on the front panel is connected with which digital input jack on the rear panel. To perform this setting, you must first select a digital input source at the front panel and then set the name of the digital input jack it is connected to here.

For example, if the input source selected at the front panel is CD and the compact disc player is connected to DIGITAL INPUT (OPT) 1, then select "OPT1" here. If the input source selected is not connected to a digital input, then select "----."

OPT1-3: Connect your digital components to any of the DIGITAL INPUT (OPT) terminals 1 through 3.

COAX1-3: Connect your digital components to any of the DIGITAL INPUT (COAX) terminals 1 through 3.

----**:** Select if the input source is not from a digital input jack.

Initial settings for each input source

Input source	Digital input
CD	OPT 1
PHONO	----
FM	
AM	
TAPE	OPT 2
VIDEO 1	COAX 2
VIDEO 2	COAX 3
VIDEO 3	OPT 3
VIDEO 4	----
VIDEO 5	Optical on front panel (fixed)
DVD	COAX 1

---- : Available for digital input but not set in initial settings.

◸ : Not available for digital input.

Input Setup

b. Digital Format

Sets the digital signal type to which priority is given during signal detection at the selected digital terminal.

The default setting is "All." If "----" is selected for this input source at the Digital Input setting, then this setting will not appear. Although you can use this default setting as is, you may change it as desired depending on the input signal format (e.g., if you know that you will always be listening to a certain input signal format from a particular input source).

All: Select for automatic detection of the input signal format. The input signal format (Dolby Digital, DTS, PCM or Analog) used by the selected input source is detected automatically to execute the required decoding process.

DTS: Select for DTS signal processing. The decoding process is executed only when DTS signals are input.

PCM: Select for PCM signal processing. The decoding process is executed only when PCM signals are input.

Notes:

- If "All" is selected and a compact disc or LD is fast-forwarded during playback, decoded PCM signals may produce a skipping sound. In such cases, change the setting to "PCM."

- If a DTS signal is not input when "DTS" is selected, the DTR-7.2 does not automatically switch to analog output even if "Auto" is selected with the Audio Selector button.

Notes on DTS:

- If you play a CD or LD that supports DTS when the "PCM" setting is selected on the DTR-7.2, the DTS encoded signal will not be decoded and noise will be output. This noise could damage the amplifier and speakers. Therefore, be sure to selected "All" or "DTS" and use the digital input jacks (OPT or COAX) to connect the DTS source.

- If you play a CD or LD that supports DTS when "All" is selected, you may hear a noise for a short while until the DTS decoder recognizes the DTS-encoded signal and starts operating. This is not a malfunction.

- If you press the pause or skip button on the player while playing a DTS source, a short noise may be heard. This is not a malfunction. In such cases, try playing the source in the "DTS" selected.

- The DTS indicator on the DTR-7.2 lights while a DTS source is played. When playback finishes and the DTS signal transmission stops, the DTR-7.2 remains in DTS mode and the DTS indicator remains lit. This prevents noise when you operate the pause or skip button on the player. Therefore, if the source is immediately switched from DTS to PCM, the PCM signal may not be played. In this case, stop the playback of the source on the player for about three seconds and then resume playback.

- You may not be able to play some DTS source signals from certain CD players and LD players even if you connect the player to the DTR-7.2 digitally. This is because the digital signal has been processed (such as the output level, sampling frequency, or frequency response) and the DTR-7.2 cannot recognize the signal as DTS data. Therefore you may hear noise when you play a DTS source while processing the signal.

- The outputs for the VIDEO 1 OUT, VIDEO 2 OUT, TAPE OUT, and ZONE 2 OUT output analog audio signals. Do not record from CDs or LDs that support DTS using these outputs. If you do, the DTS-encoded signal will be recorded as noise.

- If a compact disc or LD encoded in the DTS format is played back with "PCM" selected, only noise will be produced. Always select "All" or "DTS" when playing back DTS-encoded sources.

2-2. Multichannel Setup sub-menu Ⓑ

This setting is normally set to "No," and only needs to be changed to "Yes" if a DVD player, MPEG decoder, or other component that has a multi channel port is connected to the MULTI CHANNEL INPUT port for 5.1-channel, 6.1-channel, or 7.1-channel audio. For example, if a DVD player is connected to the MULTI CHANNEL INPUT port, then select DVD at the front panel as the input source, bring up this sub-menu, and select "Yes" for the Multichannel setting. You can only select Multichannel with the Audio Selector button when "Yes" is selected here.

```
=Advanced Menu=========

2.Input Setup
======Input:DVD ========

 2-2.Multichannel Setup
 ======Input:DVD =======

  a.Multichannel  :Yes ◄►

                  Quit:|SETUP|

```
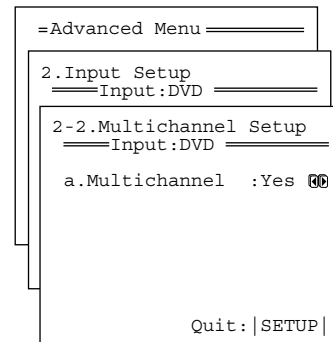

Multich Setup?

Input source selected	Multichannel
CD	No
PHONO	No
FM	No
AM	No
TAPE	No
DVD	Yes
VIDEO 1	No
VIDEO 2	No
VIDEO 3	No
VIDEO 4	No
VIDEO 5	No

Note:
When playing a device that is actually connected to the MULTI CHANNEL INPUT terminal, select Multichannel with the Audio Selector button.

Input Setup

2-3. Video Setup sub-menu Ⓑ

```
=Advanced Menu=====
 2.Input Setup
 ====Input:DVD =====
  2-3.Video Setup
  ====Input:DVD =====

   a.Video
            :DVD       ◖◗

   b.Component Video
            :INPUT1    ◖◗

   ▲▼        Quit:|SETUP|
```
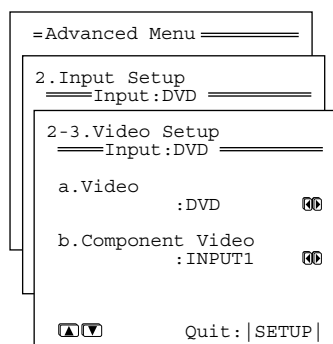

Video Setup?

a. Video

This setting allows you to match the audio from one component with the video from another. Therefore, you can set a video source to be displayed while the audio from another input source is heard. For example, this allows you to play the music from a compact disc, while displaying the picture from a video cassette player or other video source.

The default settings are given below.

Input source selected	Video
CD	Last Valid
PHONO	Last Valid
FM	Last Valid
AM	Last Valid
TAPE	Last Valid
DVD	DVD
VIDEO 1	VIDEO 1
VIDEO 2	VIDEO 2
VIDEO 3	VIDEO 3
VIDEO 4	VIDEO 4
VIDEO 5	VIDEO 5

Last Valid: When you change to an input source set to "Last Valid," the video of the input source that you changed from is continued. For example, if the selected input source is VIDEO 1, and you then change to CD (set to "Last Valid"), then the audio from the CD input is played while the video from VIDEO 1 continues.

• If no video signal is to be assigned to the input source, set "----."

b. Component Video

If a component is connected to the one of the COMPONENT VIDEO inputs (1 or 2), then that input must be set here.

The default settings are given below.

Input source selected	Component video input
CD	Last Valid
PHONO	Last Valid
FM	Last Valid
AM	Last Valid
TAPE	Last Valid
DVD	INPUT 1
VIDEO 1	INPUT 2
VIDEO 2	INPUT 2
VIDEO 3	INPUT 2
VIDEO 4	INPUT 2
VIDEO 5	INPUT 2

Last Valid (enables the source last selected): The source that was selected last continues as the input source.

Input Setup

2-4. Character Input sub-menu Ⓑ

This sub-menu allows you to give names to the stations you have preset for the AM/FM tuner, and to the input sources you have connected (excluding the tuner itself). Up to 10 characters can be entered for each name. For example, if you have a DVD connected to the VIDEO4 input jack, then you can give it the name "DVD2." Or, if you have multiple VCRs connected, you can enter the model names or manufacturer names for each one so that you do not have to remember which is connected to which input source.

If you want to enter a name for a preset broadcast radio station, select the station that you want to name and enter the name.

```
=Advanced Menu=
2.Input Setup
   ==Input:DVD ==
 2-4.Character Input
     ==Input:DVD ==

 a.Character Display
              :No    ◁▷
 b.Character
         :          ◁▷

    Press ▷ to edit.
          ◁ to clear.

   ▲▼         Quit:│SETUP│
```
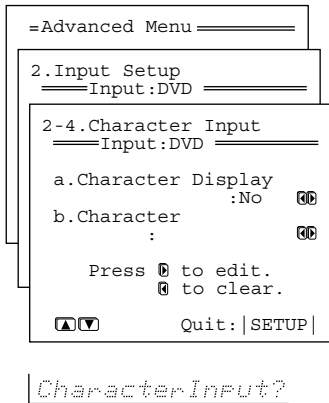

CharacterInput?

a. Character Display

Yes: Select to display the name you enter when the input source is selected.

No: Select to display the default name.

b. Character

If you have selected "Yes" for the Character Display above, then here you can enter the name that you want to display. Press ◄ cursor button to clear the current entry. Press ► cursor button to bring up the Character Input screen.

At the Character Input screen, press the cursor buttons to move the cursor to the desired character and then press the ENTER button. That character will now appear in the 10-character space field above. Continue until the name is finished or until you have reached 10 characters.

```
=Advanced Menu=
2.Input Setup
   ==Input:DVD ==
 2-4.Character Input
     ==Input:DVD ==
 b.Character
       ┌──────────┐
   ▲   │ABCDEFGHIJKLM
  ◁ ▷  │NOPQRSTUVWXYZ
   ▼   │abcdefghijklm
       │nopqrstuvwxyz
 │ENTER││0123456789-.'
 Back:  │()+*/=,:;!?_
 │RETURN│└
```
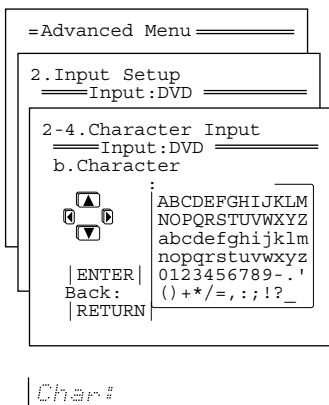

Char?

Using the cursor buttons, select the desired character and press the ENTER button. To change a character, move the cursor backward with the RETURN button or forward with the ENTER button to the location of mistaken character and enter the desired character. To erase a character, enter a blank space in its place. After completing the name, to exit, repeatedly press the ENTER button. Continue until the name is finished or until you have reached 10 characters.

2-5. Intelli Volume sub-menu Ⓑ

This sub-menu allows you to set some of the special features offered by the DTR-7.2.

```
=Advanced Menu=
2.Input Setup
   ==Input:DVD ==
 2-5.IntelliVolume Setup
     ==Input:DVD ==

  a.IntelliVolume
              : 0dB◁▷

              Quit:│SETUP│
```
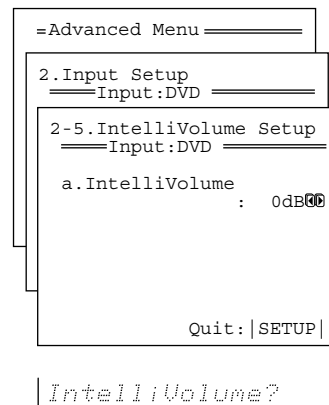

IntelliVolume?

a. Intelli Volume

When switching input sources, you may find that the output level for different components or input sources connected to the DTR-7.2 is different even though the main volume setting is the same. Under normal circumstances, you would then have to change the volume setting each time you change the input source. This Intelli Volume setting allows you to preset a volume level for each input source separately so that when you do switch from one input source to another, the DTR-7.2 adjusts the volume accordingly so that the resulting volume stays the same. To set the Intelli Volume, simply select an input source at the front panel, and if that source is quieter than other sources, increase its decibel level with the ► cursor button, or if it is louder than other sources, decrease its decibel level with the ◄ cursor button.

The Intelli Volume can be adjusted between –12 and +12 decibels.

Input Setup

2-6. Listening Mode Preset sub-menu

With the DTR-7.2, you can set a different listening mode for each different signal type that comes from each input source. For example, if your DVD player also plays compact discs and the DVD video signal is Dolby Digital and the compact disc signal is PCM, then you can set a different listening mode for each.

This is especially convenient if you frequently play the same types of movies or music.

```
=Advanced Menu=======

          :PLII         ◖◗
  g.D.F.Mono:Mono       ◖◗
  ▲▼        Quit:|SETUP|
```
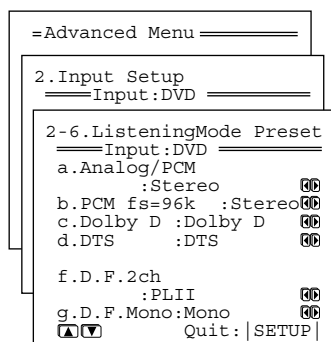

LstnModePreset?

* The 5.1-channel digital surround format has a variety of versions including Dolby Digital and DTS. The 5.1- channel digital surround format enables you to individually record and play five full-range (20 Hz to 20 kHz) channels (left and right front, center, and two surround channels) plus an LFE channel (Low Frequency Effect) for the low-range effect sound. It will create a realistic sound that can be heard in the theaters and concert halls.

Relationship between input source and listening mode

The listening modes that can be set are different for each input source format.

Note:
You may not be able to select all the listening modes shown here depending on your speaker configuration or the selected input source.

Input Setup

Input source signals

a. Analog/PCM

Analog sources consist of LP records, FM and AM broadcasts, cassette tapes, and the such. PCM (Pulse Code Modulation) is one form of digital audio signals and is recorded directly onto compact discs and DVDs without compression.

b. PCM fs=96k
Set a listening mode for the input signal from digital PCM sources recorded with a sampling rate of 96 kHz.

c. Dolby D (Dolby Digital)

Digital data with AC-3 compression and a maximum of 5.1-channel surround sound. This source signal comes from DVDs and LDs that have the ▯▯▯ mark and therefore recorded for 5.1-channel output. This source also comes from digital satellite broadcasts that support Dolby Digital.

Dialog norm

Dialogue Normalization (Dialog Norm) is feature of Dolby Digital. When playing back software that has been encoded in Dolby Digital, sometimes you may see a brief message in the front panel display that read Dialog Norm xdB ("x" being a numeric value). Dialogue Normalization serves to let you know if the source material has been recorded at a higher or lower level than usual. For example, if you see the message "Dialog Norm: +4" in the front panel display, to keep the overall output level constant just turn down the volume control by 4dB. In other words, the source material that you are listening to has been recorded 4dB louder than usual. If you do not see a message, then no adjustment of the volume control is necessary.

```
Dialog Norm: +4
```

d. DTS

DTS (Digital Theater System) is compressed digital data with a maximum 5.1-channel surround output that allows for an extremely high-quality sound. This source signal requires a DVD player that supports DTS output and comes from DVDs, compact discs, and LDs that have the ▯▯▯ mark.

f. D.F. 2 ch (Digital Format 2 channel)

2 channel digital signal (except for PCM) such as Dolby Digital. DVD or LD in which the 2 channel sound are recorded may be this type of input signal.

g. D.F. Mono (Digital Format Monaural)

Monaural digital signal (except for PCM) such as Dolby Digital. DVD or LD in which the monaural sound are recorded may be this type of input signal.

Listening Modes

Mono

This mode is for playing old movies whose sound is recorded in monaural or playing left and right channels separately in the movies which contains the different language signals recorded into individual channels. This mode also allows you to listen to the multiplexed soundtracks on DVDs, and other media that have them.

Direct

This mode delivers pure sound with minimum sound quality adjustment and filtration. The sound recorded for the right and left front channels is output to the right and left front speakers only and not output to the subwoofer.

Stereo

This mode has all input sound is output from the left and right front speakers.

Subwoofer also can be used for playback.

T-D (Theater-Dimensional)

For the best enjoyment of your home theater, it is recommended that you have at least front left and right speakers, a center speaker, and surround left and right speakers. However, if you only have front left and right speakers, you can enjoy multichannel audio by using this mode.

This mode controls the characteristics of the sound that reaches each ear to reproduce a multi-speaker setup. To receive the full effect, there is an optimum listening position (sweet spot). Refer to the explanation of the listening angle. In addition, if the reflective sound components are large, it may be difficult to achieve the desired result, so be sure to set up your system and listening position to minimize reflective sound.

DOLBY PRO LOGIC II

This mode is a new generation 5-channel surround system that provides performance between the 4-channel (left front, right front, center, and monaural surround) Pro Logic Surround and the 5.1-channel Dolby Digital Surround. This mode can be set to the Movie mode designed for playing movies and the Music mode designed for listening to music. In the Movie mode, the surround channels, which used to provide monaural output over only a narrow frequency range, now provide complete stereo output over the full frequency range. The result is movie viewing with a realistic feel of movement. The Music mode uses the surround channels to provide a natural sound space that cannot be provided with normal stereo output.

This mode can be used with VHS and DVD videos with the ▯▯ DOLBY SURROUND mark and certain television programs. The Music mode can be used with music compact discs and other stereo sources.

If no surround speakers are connected, then the surround sound is divided and output from the front left and right channels (3 stereo).

Dolby D (Dolby Digital)

Used for playing Dolby Digital source.

DTS Neo:6

This mode is for 6.1 channel playback of 2 channel sources such as PCM or analog sources. All 6 channel outputs are wide frequency range with a great separation between the different channels.

This mode can be set to the Cinema mode designed for playing movies and the Music mode designed for listening to music.

The Cinema mode is good for movies. Reproduced surround sound makes realistic feel of movement as 6.1 channel sources. This mode can be used with VHS and television programs with stereo sound.

The Music mode uses the surround channels to provide a natural sound space that cannot be provided with normal stereo output. This mode can be used with music compact discs and other stereo sources.

DTS

Used for playing DTS source.

DTS-ES Discrete 6.1

With the addition of the surround back channel, this new format has all 6.1 channels recorded independently for a completely discrete digital format. Since all channels are recorded independently, high-fidelity surround playback with the increased feeling of a separated sound space is achieved.

DTS-ES Matrix 6.1

This format has the surround back channel matrix encoded and inserted into the left and right surround channels so that at playback the output for the left, right, and back surround channels are decoded using a high-precision matrix decoder.

THX

This mode is for playing back sources using THX.

For excellent fidelity when playing back THX sounds, it is recommended to use a THX-certified speaker system.

• THX Cinema

This is the conventional 5.1-channel THX format. This mode should be used only when playing back sources that were mixed for playback in large movie theater environments.

• THX Surround EX

"THX Surround EX - Dolby Digital Surround EX" is a joint development of Dolby Laboratories and the THX division of Lucasfilm Ltd.

In a movie theater, film soundtracks that have been encoded with Dolby Digital Surround EX technology are able to reproduce an extra channel which has been added during the mixing of the program. This channel, called Surround Back, places sounds behind the listener in addition to the currently available front left, front center, front right, surround right, surround left, and subwoofer channels.

This additional channel provides the opportunity for more detailed imaging behind the listener and brings more depth, spacious ambience, and sound localization than ever before.

When released to the home consumer market, movies that were created using the Dolby Digital Surround EX technology, may have a note to that effect on the packaging. A list of movies created using this technology can be found on the Dolby web site at: http://www.dolby.com

This unit can play the 5.1 ch program in THX surround EX mode, even if the program is not encoded in Dolby Digital Surround EX format. For this kind of program, the sound from surround back channels depends on a program and may not fit to your taste.

Mono Movie

This mode is suitable for playing back monaural recording such as old movie soundtracks. The center channel delivers the unprocessed original sound, whereas the other channels deliver the center-channel sound processed with the appropriate reverberation. This allows you to enjoy monaural sound with the atmosphere of a movie theater.

Enhanced 7

Enhanced 7 intends to reproduce a natural surround environment by using 7-channel speakers. The sound effects moving smoothly toward the surround back. This mode is good for music and TV sports programs.

Orchestra

This mode is appropriate for classical and opera music. The center channel is cut and the surround channels are emphasized to widen the stereo image. It will simulate the natural reverberation that is created in large halls.

Unplugged

This mode is suitable for acoustical instrumental sounds, vocals, and jazz music. By emphasizing the front stereo image, it will simulate the acoustics that you would experience in front of the stage.

Studio-Mix

This mode is for rock and popular music. The lively sounds are enhanced for a powerful acoustic image that simulates the feeling of being in a club or rock concert.

TV Logic

This mode gives realistic acoustics to TV programs that are aired from TV studios. It enhances the entire surround sound and clarity of the conversation.

All Ch Stereo

This mode is designed for playing background music. The front, surround, and surround back channels create a stereo image that encompasses the entire area.

```
=Advanced Menu=======

3.Audio Adjust

3-1.Tone Control

a.Bass        :   0 ◀▶

b.Treble      :   0 ◀▶

▲▼           Quit:│SETUP│
```
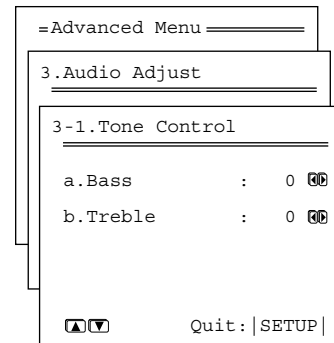

Tone Control?

	Parameter	Setting Initial value
a Bass	−12 to +12	0
b Treble	−12 to +12	0

Note:
If Direct or THX is selected as the listening mode, these settings cannot be made. To make these settings, first select another listening mode.

3-2. Surround Speakers Ⓑ

This setting allows you to decide which speakers to output to when surround back speakers are connected and you are playing back a 5.1-channel source.

	Parameter	Setting Initial value
a Surround Speakers	Surround L/R, Surround Back, Surr L/R + Back	Surround L/R

Surround L/R: This outputs the sound to the surround left and right speakers as normal and outputs nothing to the surround back speaker.

Surround Back: This outputs the sound to the surround back speakers and outputs nothing to the surround left and right speakers.

Surr L/R+Back: This outputs the sound to both the surround left and right speakers and the surround back speaker.

Note:
If the Surr Back Out setting in the Speaker Config sub menu is set to "1ch," the Surround Speakers sub menu is disabled.

Audio Adjust

3-3. Sound Effect Ⓑ

Turn on and off the various sound effects.

	Parameter	Setting Initial value
a RE-EQ	On, Off	Off
b Upsampling	On, Off	Off
c Subwoofer (Ana/PCM)	On, Off	On
d Late Night	Off, Low, High	Off

a) Re-EQ

Re-EQ (re-equalization) takes the edginess or "brightness" out of your home cinema sound to compensate for the fact that sound mixed for theaters may sound too bright when played back through speakers in the home environment.
This can be set to either "On" or "Off."
This parameter is enabled for listening modes other than the THX, T-D, Direct, PL II Music, or Neo:6 Music listening mode.

b) Upsampling

Upsampling processes the input digital signal, or the digital signal converted from an analog input source, and converts its digital sampling frequency to twice its current frequency for an even further detailed sound reproduction. This can be set to either "On" or "Off." When "On" is selected, the Upsampling indicator lights.

c) Subwoofer

When "Yes" is selected for the Subwoofer setting in the Speaker Config sub-menu, set this to "Off" if you do not want to have sound output from the subwoofer. This setting is only effective when the input source is Analog/PCM. If "No" is selected for the Subwoofer setting in the Speaker Config sub-menu, then this setting will not appear.

d) Late Night

Cinema sound has a vast dynamic range; therefore, to hear the quieter sounds such as human conversations, they must be played back at larger volumes. This function is especially useful if you wish to play a movie at low volumes during the nighttime.
This can be set to either "Off" or "Low," or "High."
When this parameter is set to High or Low, the dynamic range of the sound is narrowed down to allow you to easily hear minute sounds at low volume.

   Off: Turns off the Late Night function.
   Low: Lowers the dynamic range.
   High: Narrows down the dynamic range.

   Notes:
   • The Late Night function is effective only on Dolby Digital encoded software.
   • The depth of the Late Night effect is determined by Dolby Digital software. Some sounds may produce no or little effect.

3-4. Delay

This sub-menu gives you various ways to adjust the timing of the audio output from the speakers to give certain soundfield effects or to adjust for unwanted asynchronous video and audio tracks.
This sub-menu does not appear if "Direct" is selected as the listening mode.

	Parameter	Setting Initial value
a A/V Sync	0.0 ms to 74.0 ms	0.0 ms
Relative Delay		
b Center	–4.0 ms to +6.0 ms	0.0 ms
c Surr L/R	–4.0 ms to +6.0 ms	0.0 ms
d Surr Back	–4.0 ms to +6.0 ms	0.0 ms

a. A/V Sync

If a digital signal processor is connected, there may be times when the audio and video from a DVD or LD player is not output in perfect sync. The result is where the sound and picture do not match and the sound is heard too early. In such a case, use this setting to properly synchronize the audio and video. This setting can be set between 0 to 74.0 ms in 0.5-ms increments. Under normal circumstances, this can left at 0 ms. If set between 25.0 and 74.0 ms, upsampling is fixed to 24.0 ms. For input sources using the multi channel port, this setting will not appear.

Relative Delay
b. Center, c. Surr L/R, d. Surr Back

Besides level and delay adjustments, the DTR-7.2 provides the ability to change or adjust the relative speaker position to fine tune the soundfield for the listener. This is accomplished using Onkyo's unique Enhanced Spatial Positioning Algorithm. This adjustment provides 10 milliseconds of delay for the speakers, which is equivalent to moving the speaker 10 feet (3 meters) away. This adjustment is set up to provide –4.0 or +6.0 milliseconds (–4 or +6 feet/–1.2 or +1.8 meters) of adjustment to the listener's position.
Once the coarse adjustments--speaker level and distance adjustments--are made, the system is set up to provide a typical or broad surround environment. By adjusting the relative position of the speakers, we are able to alter the soundfield to be more spread out (deeper) or focused (shallower).

3-5. LFE Level Setup

This sub-menu is for setting the LFE (Low Frequency Effect) levels included in Dolby Digital and DTS software.

	Parameter	Setting Initial value
a Dolby Digital	–∞, –10 dB to 0 dB	0 dB
b DTS	–∞, –10 dB to 0 dB	0 dB

a. Dolby Digital

The level can be adjusted to either –∞ or between –10 to 0 decibels in 1-decibel increments. For Dolby Digital input source signals, the LFE level becomes that set here. A setting of 0 decibels is recommended for optimum performance; however, if the low frequency range is too strong, lower this setting as necessary.

b. DTS

The level can be adjusted to either –∞ or between –10 to 0 decibels in 1-decibel increments. For DTS input source signals, the LFE level becomes that set here. A setting of 0 decibels is recommended for optimum performance; however, if the low frequency range is too strong, lower this setting as necessary.

Audio Adjust

3-6. Mono Setup
The settings shown below are enabled when the listening mode is set to "Mono."

	Parameter	Setting Initial value
a Academy	On, Off	Off
b Input Channel	Auto L+R, Left, Right	Auto L+R

a) Academy
Older monaural film mixes relied on high-frequency rolloff in presentation to sound properly balanced, so that excessive hiss from the grain structure of the film would not be heard. The high-frequency loss was typically due to a combination of optical slit loss, electrical filters, loudspeaker response, and screen loss. Some films have been transferred to video without such a high-frequency rolloff, and thus sound overly bright and hissy. This unit includes this "Academy filter," which is based on contemporary playback practices for such films over wide-range systems.
This can be set to either "On" or "Off."

b) Input Channel
This allows you to set which input channel to use for monaural sound.

Auto L+R: Select this under normal circumstances.

When the input source is center channel only, this channel is used for monaural sound input channel. Otherwise, left and right channels are mixed and the mixed signal is used for monaural sound input channel.

Left/Right: You will need to select either left or right when playing a video source that contains bilingual data. In such a case, the left and right channels will contain different language. Select the channel with the language you desire.

3-7. Theater-Dimensional Setup
Select this to modify the Theater-Dimensional (T-D) listening modes. The parameters that can be set are shown in the table below.

	Parameter	Setting Initial value
a Listening Angle	20 deg, 40 deg	20 deg
b Center	On, Off	Off
c Front Expander	On, Off	On
d Virtual Surr Level	–3 dB to +3 dB	0 dB
e Dialog Enhance	On, Off	Off

Theater-Dimensional
For the best enjoyment of your home theater, it is recommended that you have at least front left and right speakers, a center speaker, and surround left and right speakers. However, if you only have front left and right speakers, you can enjoy multichannel audio by using this mode.
This mode controls the characteristics of the sound that reaches each ear to reproduce a multi-speaker setup. To receive the full effect, there is an optimum listening position (sweet spot). Refer to the explanation of the listening angle. In addition, if the reflective sound components are large, it may be difficult to achieve the desired result, so be sure to set up your system and listening position to minimize reflective sound.

a) Listening angle
The listening angle is the angle subtended by the front left and right speakers as seen from the listener. The setting of 20 and 40 degrees are only for nominal purposes, so select the setting that is closest to your actual listening angle.

Front left speaker   Front right speaker

Listening angle
b) Center
For systems that have a center speaker, the center channel signal can be output from the center speaker. For instance, in systems where the front left and right speakers are small, use of the center speaker may provide a better sound space. (If your system uses a center speaker, be sure to perform the level calibration with the left and right speakers in the Speaker Setup menu beforehand.)

On: The center channel signal is output to the center speaker.

Off: The center channel signal is output from the front left and right speakers (Phantom Center).

c) Front Expander
The front expander function spreads out the sound from the front speakers for the feeling of a wide sound space.

On: Select to turn on the front expander function to simulate a wider sound space.

Off: Select to turn off the front expander function for a normal sound space.

d) Virtual Surr Level
This parameter adjusts the virtual surround level. This can be set from –3 to +3 decibels.
Lowering this setting can improve the sound when the definition is unclear or when the sound feels unnatural.

e) Dialog Enhance
This parameter allows you to adjust the dialog sound level from the center speaker if it is difficult to hear.

On: Enhances the vocal ranges for the center channel signal.

Off: Outputs the center channel signal at the regular level and frequency characteristics.

43

Audio Adjust

3-8. Surround Setup

Select this to modify the plain Dolby Digital, DTS, and Pro Logic II Surround listening modes. The parameters that can be set are shown in the table below.

	Parameter	Setting Initial value
a Surr Mode (Analog/PCM)	Pro Logic II Movie Pro Logic II Music DTS Neo:6 Cinema DTS Neo:6 Music	Pro Logic II Movie
b Surr Mode (D.F.2ch)	Pro Logic II Movie Pro Logic II Music	Pro Logic II Movie
c DTS-ES	Auto, On, Off	Auto
<Pro Logic II Music>		
d Panorama	Off, On	Off
e Dimension	0, 1, 2, 3, 4, 5, 6	3
f Center Width	0, 1, 2, 3, 4, 5, 6, 7	3

a) Surr Mode (Analog/PCM)

Changes the surround mode for 2-channel analog/PCM input signals.

b) Surr Mode (D.F.2ch)

Changes the surround mode for 2-channel digital input signals.

c) DTS-ES

Selects DTS-ES mode.

Auto: When the DTS source has the DTS-ES flag (ID signal for DTS-ES), the listening mode is automatically changed to DTS-ES Discrete 6.1 or DTS-ES Matrix 6.1. If the DTS source has no DTS-ES flag, the mode is changed to DTS 5.1.

On: When the DTS source has the DTS-ES flag, the listening mode is automatically changed to DTS-ES Discrete 6.1 or DTS-ES Matrix 6.1. If the DTS source has no DTS-ES flag, the mode is forced to be DTS-ES Matrix 6.1.

Off: Even when the DTS source has the DTS-ES flag, the DTS-ES listening modes are not used. The DTS sources are always played in DTS 5.1 mode.

d) Pro Logic II Music Panorama

Use this listening mode to expand sound space in front of a listener to both side of the listener.

On: Turns on the PL II Music Panorama mode.

Off: Turns off the PL II Music Panorama mode.

e) Pro Logic II Music Dimension

Use this listening mode to modify the sound space location forward or backward.

The setting of "3" is the normal position and setting to "2" or lower moves the sound space forward and setting to "4" or higher move the sound space backward.

If the stereo recording has excessive broadness or too strong surroundness, move the sound space forward to get the appropriate sound balance. In contrast, if the stereo recording is somewhat felt like monaural or has narrowness, move the sound space backward to get more surroundness.

f) Pro Logic II Music Center Width

In Pro Logic II decoding, outstanding center signal will be output only from center speaker. When the center speaker is not used, the decoder divide the center signal equally to each front left and right speakers to create "phantom" center sound image.

The Pro Logic II Music Center Width mode allows you to adjust where the center sound image is heard from. Depending on your setting, the center sound image will be heard from center speaker only, front left and right speakers (as phantom center sound image), or all three speakers (center, front left and right) in various level combinations. For home use, applying some "width" to center signal will improve the level balance for center and main speakers, and effect the width of the center sound image, or "mass" of the sound. Many of sound recordings processed for stereo playback will be reproduced better by controlling the parameter for this listening mode. The recommended setting for Pro Logic II Music mode is "3." This allows you to easily distinguish the Pro Logic II Music mode from the Pro Logic II Movie mode whose setting is automatically set to "0."

3-9. THX Setup

Select this Setup THX listening modes; the one that is currently set is the one that is modified. The parameters that can be set are shown in the table below.

	Parameter	Setting Initial value
a RE-EQ (THX)	Off, On	On
b Decoder (Analog/PCM)	PL II, Neo:6	PL II
c THX Surround (Dolby D)	Off, On	Auto

a) Re-EQ

Re-EQ (re-equalization) takes the edginess or "brightness" out of your home cinema sound to compensate for the fact that sound mixed for theaters may sound too bright when played back through speakers in the home environment.

This can be set to either "On" or "Off."

This parameter is only enabled for the THX listening mode. Also, this is set to "On" when the DTR-7.2 is turned on.

b) Decoder

Select the decoding mode for THX processes.

PL II: Select for Dolby Pro Logic II Movie.

Neo:6: Select for DTS Neo:6 Cinema.

c) THX Surround EX (Dolby D)

This setting allows you to set whether or not Dolby Digital sources will be played back using THX Surround EX when a surround back speaker is connected.

Auto: Automatically outputs signals with EX-identifying signals using THX Surround EX.

On: Outputs using THX Surround EX regardless of whether or not the signal contains EX identifiers.

Off: Does not output using THX Surround EX regardless of whether or not the signal contains EX identifiers.

Audio Adjust

3-10. 3-11. 3-12. 3-13. 3-14. 3-15.
**Mono Movie Setup/Enhanced 7 Setup/Orchestra Setup/
Unplugged Setup/Studio-Mix Setup/TV Logic Setup**

When you set the parameters of this sub-menu and select Mono Movie, Enhanced 7, Orchestra, Unplugged, Studio-Mix, or TV Logic as the listening mode, the set parameters become enabled.

	Parameter	Setting Initial value
a Front Effect	Off, On	On
b Reverb Level	Low, Middle, High	Middle
c Reverb Time	Short, Middle, Long	Middle

a) Front Effect
Some live recordings contain acoustic reverberation. When you play these sources, more reverberation will be applied by the DSP, creating too much reverb effects and the sound loses frame or presence. In this case, set this setting to "Off." No reverberation from the DSP will be applied to the sound output from the three front channels, so the sound source is be played as it is without any further reverberation.

b) Reverb Level
This parameter allows you to adjust the depth of acoustic reverberation to match the playback source material, the acoustics of your room, and such other factors.
Select from the three settings "Low," "Middle," and "High."

c) Reverb Time
Adjust the reverb time to match the source being played back and the acoustics of the room. Select from the three settings "Short," "Middle," and "Long."

Volume Setup?
```
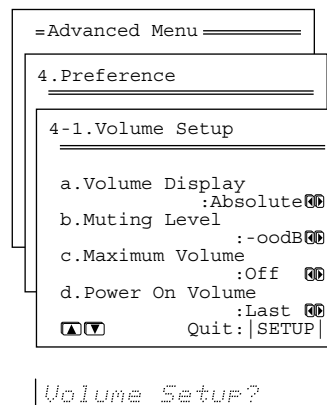

a. Volume Display
You can choose from two ways of displaying the volume setting on screen.

> **Absolute:** This displays the volume with a minimum of min (0) for no sound and a maximum of max (100). As a reference, the volume setting of Ref (82) is used as the 0-decibel for the relative display method.

> **Relative:** This displays the volume as a decibel value on a scale with a designated reference point that is displayed as 0, which equals the volume setting of 82 for the absolute display method. With this display method, the minimum value is −∞, the next highest is −81, and the maximum value is +18.

b. Muting Level
This sets the attenuation level during playback when the MUTING button is pressed on the remote controller. This can be set between −∞, −50 and −10 decibels in 10-decibel increments.

c. Maximum Volume
This setting allows you to set the maximum volume that can be output with the Master Volume dial to prevent components from being damaged by excessively loud volumes. For the absolute volume display method, this can be set between 50 and 99. For the relative volume display method, this can be set between −32 and +17 decibels. To not set a maximum volume, select "Off."

d. Power On Volume
This sets a designated volume setting for the DTR-7.2 to be set every time that the power is turned on. This prevents the DTR-7.2 from being turned on while it is set to an extremely high volume and suddenly output very loud sounds. For the absolute volume display method, this can be set between min and max. For the relative volume display method, this can be set between −∞ and +18 decibels. If you do not mind having the DTR-7.2 turned on with its current volume setting, set this to "Last."

Preference

4-2. Headphones Level Setup sub-menu

Listening to Radio Broadcasts

FM Mode

Tuning ▼/▲

FM AM
One of the features of the DTR-7.2 that is most frequently used is its ability to play FM and AM broadcast radio stations. The DTR-7.2 provides a number of listening modes perfect for listening to the radio and getting the most out of your audio system. Also, by presetting radio stations that you listen to frequently, you can select them easily by pressing the CH ⊕/⊖ button on the remote controller.

Tuning into a radio station

1. **Press either the AM or FM input source button.**

   FM   AM

2. **Using the Tuning ▲ and ▼ buttons on the front panel, tune into the station you desire.**

   "FM STEREO"   Tuned
   (Lights red) in stereo   Auto mode

   FM 88.10MHz
   Band   Frequency

   - The tuner frequency changes in 50 kHz increments for FM and 10 kHz increments for AM.
   - When tuning into FM stations, you can press the Tuning ▲ or ▼ button continuously for more than 0.5 seconds to scan for an FM station in the direction of the button you pressed (FM auto tuning mode). After you release the button and a station is received in stereo, the scanning stops.

Listening to a stereo radio station (FM mode)

When you tune into a radio station, ▶ TUNED ◀ indicator appears in the display. If you tune into an FM station in stereo, then "FM STEREO" appears. If the signal is weak, it may be impossible to tune into the station in stereo. In such a case, **press the FM Mode button** on the front panel. The AUTO indication disappears and the radio station is output in the monaural mode. To return to stereo, press the FM Mode button again. "AUTO" appears. Some inter-station noise may be heard, but the sound will not cut in and out as it would if stereo was selected.

Phones   **Input source buttons**
Though the DTR-7.2 is often used to listen to the radio, it does not show you its true ability until it is used to play music or watch videos, DVDs, and the like. The DTR-7.2 has the latest in state-of-the-art features to play back today's acoustic technologies with the utmost in fidelity and power. From a two-speaker system to a seven-speaker system, you are assured a sound space that you can always enjoy.

Basic operation

To use the remote controller, first press the RCVR button.

1. Press the input source (or input selector on the remote controller) button.

Adjusting the bass and treble

You can adjust the bass and treble levels at the Setup menu: Audio Adjust → Tone Control. This function only affects the front left and right speakers, center speaker, and subwoofer. Only the bass level can be adjusted for the subwoofer (the treble adjustment is not effective). However, these adjustments cannot be made if the listening mode is set to Direct.

Listening with headphones

To listen with headphones, plug a pair of headphones with a standard stereo plug into the Phones jack on the DTR-7.2 front panel.
When you connect headphones, the unit will enter Stereo mode automatically and no sound will be heard from the speakers.
When the headphones are unplugged, the DTR-7.2 returns to its original listening mode.
When using the headphones, you can only use the Direct, Stereo, and Mono listening modes.
If you have selected MULTI CH INPUT, you will hear sound only from the FRONT L and R channels.
The headphone volume level can be adjusted at the Setup menu (see page 47).
Note that the signal to the remote zone (Zone 2) will not be affected whether or not headphones are connected.

7   8   9

Direct (DIRECT): Changes the listening mode directly to the Direct listening mode. If pressed, the listening mode for the selected input source set in the Listening Mode Preset is also changed to the Direct listening mode.

Stereo (STEREO): Changes the listening mode directly to the Stereo listening mode. If pressed, the listening mode for the selected input source set in the Listening Mode Preset sub-menu is also changed to the Stereo listening mode.

Surround (SURR): Changes the listening mode to the surround mode for the current input signal (e.g., Dolby Pro Logic II, Dolby Digital, or DTS). If pressed, the listening mode for the selected input source set in the Listening Mode Preset is also changed to the Surround listening mode.

When the Surround listening mode is selected

• **When playing back DTS sources**
Switches the DTS-ES setting from Auto → On → Off.

• **When playing back Analog/PCM sources**
Switches from Pro Logic II Movie → Pro Logic II Music → DTS Neo6:Cinema → DTS Neo6:Music.

• **When playing back D.F. 2-channel sources**
Switches from Pro Logic II Movie → Pro Logic II Music.

THX: Changes the listening mode to the THX listening mode.

When the THX listening mode is selected

• **When playing back Dolby Digital sources**
Switches the THX Surround EX mode (Auto → On → Off) if the source is a Dolby Digital-compatible source.

• **When playing back Analog/PCM sources**
Switches the decoding mode (Pro Logic II Movie → DTS Neo6:Cinema) for THX processing.

• **When playing back DTS sources**
Allows you to enjoy the DTS THX Cinema, DTS-ES Discrete 6.1 THX Cinema, and DTS-ES Matrix 6.1 THX Cinema surround systems. The DTS-ES mode changes from Auto → On → Off.

If surround back speakers are not connected, you cannot select THX Surround EX, DTS-ES Discrete 6.1, or DTS-ES Matrix 6.1.

DSP ◀/▶: Changes the listening mode as shown below.
Mono → Direct → Stereo → Theater-Dimensional → Surround* → THX* → Mono Movie → Enhanced 7 → Orchestra → Unplugged → Studio-Mix → TV Logic → All Ch Stereo → Mono.
If pressed, the listening mode for the selected input source set in the Listening Mode Preset is also changed.

* The display will differ depending on the format of the current signal.

Entering names for input sources and tuner stations

You can enter names for your components or radio station names as names for your input sources and have them displayed in the front panel display when that input source is selected (see page 37).

Entering characters using the DTR-7.2:

1. **Press the Setup button.**

2. **Press the ▽ button to select the "2.Input Setup" menu and press the Enter button.**

3. **Press the ▽ button to select the "Character Input?" sub-menu and press the Enter button.**

4. **Press the ▽ button to select "Char: " and press the ▶ button.**

5. **The screen changes to show you the characters you have already entered (< >) and then automatically changes to the Character Selection screen (ABCDEF...).**

   Press the ▲, ▼, ◀, and ▶ buttons to select the character you desire and press the Enter button. The screen again shows you the characters entered for approximately two seconds and returns you to the Character Selection screen.
   If you enter an incorrect character, press the Return button to move the cursor to the left and re-enter the character.
   Repeat the above operations to enter up to 10 characters. When you are finished, the entered name appears.

6. **Press the Setup button to complete the procedure.**

To correct entered characters
Perform steps 1 to 4 given above. After performing step 4, press the ▶ button to display a name that has already been entered. Press the Enter button to move the cursor to the location of the character that you want to change, enter the new character, and press the Enter button.

To delete an entered name
Perform the steps 1 to 3 given above. At step 4, press the ◀ button.

Selector   AUDIO

3. **Turn on the connected component and start playing the desired media.**

4. **If necessary, adjust the output level of each speaker as desired (see page 52).**

   Adjust the speaker output levels so that you can hear the same sound level from each speaker at the listening position. For the front right, front left, center, surround right, and surround left speakers, the output levels can be adjusted between –12 to +12 decibels. The subwoofer can be adjusted between –30 to +12 decibels.

5. **Adjust the volume with the Master Volume dial or the VOL △/▽ buttons on the remote controller.**

DTR-7.2   **Remote controller**

Master Volume   △ VOL ▽
Using the tone control:
Each time you press the DIRECT button on the remote controller, the display changes from "Direct"→"Tone On." To make bass and treble adjustment work for multichannel sources, you must first set the tone control to "Tone On."

1. **Press the Direct button (or DIRECT button on the remote controller) to display "Tone On."**

DTR-7.2   **Remote controller**

Direct   2
                 DIRECT
   When pressed only once, the current setting appears, so press twice to change the setting.

2. **Adjust the tone at the Setup menu: Audio Adjust → Tone Control.**

Note:
Adjusting the volume level of each speaker for the MULTI CH INPUT source does not affect the speaker level adjusted by the listening position.

Enjoying music in the remote zone

Zone 2 indicator   **Zone 2**   **Off**

Input source buttons

SLEEP   **ON/STDBY**

INPUT SELECTOR buttons
ZONE 2

Playing music using the buttons on the DTR-7.2

1. Press the Zone 2 button on the DTR-7.2.

2. Select a source.
After pressing the Zone 2 button, you must press an input source button within 5 seconds. The Zone 2 indicator lights.

Ex.: When the CD button is pressed.

> *Zone2Sel:CD*

To select the same source for the remote zone that is selected for the main zone, press the Zone 2 button again until "Zone2Sel:SOURCE" appears in the display.

> *Zone2Sel:SOURCE*

When "Zone2Sel:Off" is displayed, the output to the remote zone is turned off.

Notes:

- If a sleep time is set with the SLEEP button, it will also work for the remote zone.
- If the source for the main zone is selected as the source for the remote zone and the source for the main zone is changed, then the source for the remote zone will change as well.
- The Zone 2 terminal is an analog output. Digital signals are not output. If no sound is heard from the selected input source, check if the component is connected to the analog inputs.
- If the Rec Out button is pressed in the main room while someone is using the system in the remote zone, the Zone 2 function will be deactivated and the source will turn off in the remote zone.
- If you select FM (or AM) with the input source buttons when the source for the remote zone (Zone 2) is set to AM (or FM), the output for the remote zone also changes to AM (or FM).
- When you are using the remote zone (Zone 2), ᴙI system operation will not work.
- When you are not using the remote zone (Zone 2), press the Zone 2 button and then press the Off button to turn off the Zone 2 indicator.

Selecting an input source using the remote controller

Turning on the Zone 2 and putting it in the standby state when the DTR-7.2 is in the standby state:
After pressing the ZONE 2 button, press the ON/STDBY button within 5 seconds.

Selecting an input source:
After pressing the ZONE 2 button, press an input source button within 5 seconds.

If tuner is selected with the TUN button, the CH +/– button becomes enabled.
Notes:

- Adjust the volume for the remote zone at the pre-main amplifier.
- After you press the ZONE 2 button on the remote controller, the Standby indicator on the DTR-7.2 flashes for five seconds. During this time, you will not be able to perform operations in the main zone using the remote controller.

Recording a source

Rec Out

Input source buttons
Notes:

• You cannot record the surround effects.

• Digital signals input to the DIGITAL INPUT (COAX) and DIGITAL INPUT (OPT) inputs will be output to the DIGITAL OUTPUT (OPT) output.

• There are some restrictions on recording digital signals. When making digital recordings, consult the instruction manual that came with your digital recording equipment (e.g., MD recorder or DAT deck) to know what restrictions are imposed.

• You cannot record the source connected to the MULTI CHANNEL INPUT connector.

To record the input source signal you are currently watching or listening to

This method outputs to the audio and video outputs the currently selected input source signal. This method allows you to a signal while you are actually listening to or watching it.

1. Select the input source to record by pressing the corresponding input source button.

The input source is now selected and you may watch or listen to it as desired.

2. Press the Rec Out button repeatedly until "Rec Sel:SOURCE" appears in the front display.

The currently selected input source signal to the TAPE OUT, VIDEO 1 OUT, VIDEO 2 OUT outputs for recording.

```
Rec Sel :SOURCE
```

3. Start recording at the recording component as desired.

To confirm the settings, press the Rec Out button. The current settings will appear for 3 seconds in the front display.

Recording the video from one source and the audio from another:

You can add the sound from one source to the video of another source to make your own video recordings.
Below is an example of recording the sound from a compact disc player connected to CD IN and the video from a video camera connected to Video 5 input terminal to video cassette tape in a video cassette recorder connected to the VIDEO 1 OUT jack.

1. Press the CD input source button.

2. Set "VIDEO 5" for the Video setting in the Video Setup sub-menu of the Setup menu: Input Setup → Video Setup → Video.

3. Insert a CD in the CD player and insert a tape in the video camera connected to the Video 5 input terminal.

4. Insert a video tape for recording in the video cassette recorder connected to VIDEO 1 OUT.

5. From this step on, follow the same procedure as described in 2 and 3 above.

Notes:

• If you change the input source during recording, you will record the signals from the newly selected input source.

• Digital input signals are only output to the digital outputs and analog input signals are only output from the analog outputs. There is no conversion from digital to analog or vice versa. When connecting CD players and other digital components, do not connect only the digital terminals, but the analog ones as well.

To record an input source signal different from that you are currently watching or listening to

This method outputs to the audio and video outputs the signal from the input source that you select here. This allows you to record an input source signal different from that which you are listening to or watching at the time of recording.

1. Press the Rec Out button.

2. Within 5 seconds, press the input source selector button of the input source signal that you wish to record.

The signal from the selected input source will now be output to the TAPE OUT, VIDEO 1 OUT, and VIDEO 2 OUT outputs for recording.

```
Rec Sel :VIDEO3
```

3. Start recording at the recording component as desired.

To confirm the settings, press the Rec Out button. The current settings will appear for 5 seconds in the front display.

Notes:

• Be aware that the remote (Zone 2) and recording (Rec Out) outputs use the same circuit and therefore can be used at the same time.

• If you select FM (or AM) with the input source buttons when the recording source is set to AM (or FM), the output for the recording source also changes to AM (or FM).

Using remote controller

Overview

The RC-461M remote controller is a useful tool to help you operate the components of your home theater. To do so, first press the Mode button that corresponds to the device you wish to control. Then simply press the desired operation button and the component will operate accordingly. For example, if you wish to select the CD input source at the DTR-7.2 with the remote controller, first press the RCVR MODE button to select the DTR-7.2 and then press the CD (INPUT SELECTOR) button.
Calling up a preset radio station

1. **Press the RCVR MODE button.**

   The RCVR MODE button lights green.

2. **Press the TUN input selector button.**

3. **Press the CH ⊹ or = button to select the desired preset station number.**
Controlling an Onkyo cassette tape deck

The ℞ℐ connector of the Onkyo cassette tape deck must be connected to the DTR-7.2 (see page 14).

1. **Press the RCVR MODE button.**

   The RCVR MODE button lights green.

2. **Press the desired operation button.**

   The buttons shaded in the figure to the left are the operation buttons that can be used to control an Onkyo cassette tape deck.

Operation buttons:

▷**:** Play

▢**:** Stop

◁◁**:** Rewind

▷▷**:** Fast forward

▷▷◁**:** Press during playback to skip to the beginning of the next track.

◁▷◁**:** Press during playback to skip to the beginning of the current track.

R (Rec): Record/Pause

⊞**:** Reverse playback

You may also use the following buttons:

VOL △/▽**:** Adjusts the volume at the DTR-7.2

MUTING: Activates the muting function at the DTR-7.2

Note:
Even for devices with the ◁◁ and ▷▷ buttons, signal discrepancies may cause them not to work properly.

CABLE — VCR
SAT — TV

VOL △/▽

MUTING
SAT, CABLE, VCR, and TV MODE buttons

No preset codes are programmed into the SAT, CABLE, VCR, and TV MODE buttons. You can use these buttons to program the remote controller signals of other devices.

There are two methods. One method is selecting the name of a different brand from the table, entering the setting number listed, and calling up the pre-programming code (see page 61). The other method is learning the commands from the other brand's remote control directly into this remote controller (see page 64).

When in the SAT, CABLE and VCR mode, you may use the following buttons:

VOL △/▽: Adjusts the volume at the DTR-7.2

MUTING: Activates the muting function at the DTR-7.2

59

Learning a pre-programming code

The remote controller has three learning functions. One is entering the signal number for a remote controller of another brand that is pre-programmed. Another is a normal learning function that enables the remote controller to learn the codes from other remote controllers. And the last is a macro learning function that enables you to program a series of operations into the remote controller so that the operations can all be performed at once by pressing one button.
Caution:
With some brand's components, some buttons may not work correctly. In this case, program the command separately.

Learning a pre-programming code

By learning a pre-programming code, you can make the RC-461M remote controller able to operate a product from another brand. The buttons that are used for operation are given on the next page.

1. **Find the 3-digit number for the brand name of the component that you want to operate in the table on the next page.**

2. **Turn on the component that you want to operate (i.e. DVD, satellite tuner, or television).**

3. **While holding down the MODE button on the RC-461M that you want to program, press the DISPLAY button, and then release both buttons.**

   The SEND/LEARN indicator lights when the MODE button is pressed and turns off when the DISPLAY button is pressed. Wait until the indicator turns off before releasing both buttons. Then the SEND/LEARN indicator lights again.

4. **Within 30 seconds, enter the 3-digit code number.**

   The SEND/LEARN indicator flashes twice slowly. If the SEND/LEARN indicator quickly flashes three times, then either a mistaken 3-digit code was entered or an incorrect operation was performed. If this occurs, return to step 3.

5. **Press the button that you programmed and check if the system operates correctly.**

   - If the component does not operate properly, return to step 3 and repeat the steps above.
   - If it still does not operate properly, then program the commands one by one to the buttons on the RC-461M remote controller.

When entering the code of Integra/Onkyo DVD players:
There are three SETTING numbers. Choose the SETTING number according to how you will be using the DVD player.

No. 601/613: These codes are for operating the Integra/Onkyo DVD player by pointing the remote controller directly at it, either because it does not have an ꓤꓲ terminal, or it does but you are not using an ꓤꓲ cable and connecting it. First enter 601 and if it does not operate properly, enter 613.

No. 600: This code is for Integra/Onkyo DVD players that have an ꓤꓲ terminal that you are connecting to the DTR-7.2 with an ꓤꓲ cable. You will then operate the DVD player by pointing the remote controller at the remote control sensor on the DTR-7.2. You do not need to enter this code because it is factory preset. However, if the code has been changed to 601 or 613, then you will need to change it back to 600.

Learning a pre-programming code

Pre-programming codes

Note:

If more than one code is given in the table, try the code one by one until you reach the code for your component (i.e. if the first code does not work, then try the next).

Programming procedure

When programming the commands of another remote controller to the RC-461M remote controller, you must first decide under which MODE button you want the commands to be linked. In general, you will select the MODE button that corresponds to the component you are programming. For example, if you are programming the functions from a remote controller for a compact disc player, you would choose the CD MODE button. Then, by pressing the CD MODE button, the buttons on the RC-461M remote controller will change to the commands you program here to operate the compact disc player.

After programming which MODE button to use, you will then transfer the separate commands from the other remote controller over to the RC-461M remote controller one at a time. Each command is then programmed to a different button on the RC-461M remote controller. Any button is programmable for this step except for the eight MODE buttons (RCVR, CD, DVD, MD, SAT, CABLE, VCR, and TV), the two MACRO buttons (DIRECT and MODE), and the LIGHT button.

Even after the commands have been memorized, keep your old remote controller in a safe place. If for some reason the commands are lost (e.g., when the batteries run down), it will be necessary to memorize them once again.

1. **Place the remote controller and the remote controller for the other device facing each other at a distance of 2 to 6 inches (5 to 15 cm) apart.**

2. **While pressing and holding down the desired MODE button on the remote controller, press the ENTER button and then release both buttons.**

   When you press and hold down the MODE button, the SEND/LEARN indicator lights. When you press the ENTER button, the lamp turns off. When you release the buttons, the lamp lights again.

3. **Press and release the button on the remote controller to which you want to transfer the next command.**

   You may select any button but the eleven ones indicated in the figure below. When you press the button, the SEND/LEARN indicator turns off. When you release the button, the indicator lights again.

   If you press the wrong button by mistake, press that same button again. The SEND/LEARN indicator flashes twice, and the remote controller exits the programming mode.

LIGHT

DIRECT MACRO

MODE MACRO
MODE buttons

▭ **: Buttons that cannot be programmed.**

Programming the commands of remote controllers for other devices into the remote controller

4. **Press and hold down the button (that corresponds to the command you are programming) on the remote controller of the other device until the SEND/LEARN lamp on the remote controller flashes twice.**

   After flashing twice, the SEND/LEARN indicator will light again.

5. **Repeat Steps 3 and 4 to transfer all the commands you desire from the other remote controller and program them to buttons on the remote controller under the same MODE.**

   Repeat Steps 2 through 4 to program commands to a different MODE (e.g., when programming from a different remote controller).

6. **Press the MODE button that you pressed in step 2 to complete the programming.**

7. **Operate the newly programmed buttons to make sure the learning function was performed properly.**

Notes:
- The remote controller codes for Integra/Onkyo compact disc players, cassette tape decks, DVD players, and mini disc recorder have already been programmed into buttons on the remote controller. You may, however, use these buttons to program the codes for other remote controllers. If you wish to restore the Integra/Onkyo preset codes after you program new codes, you must first erase the new codes (see page 66).
- The remote controller has 408 memory slots (8 modes × 51 buttons). Some remote controllers may have more commands that can be remembered by the remote controller. In such cases, it will be necessary for you to determine which commands are more important than others.
- If no button is pressed for more than 30 seconds during the programming, or if you perform an invalid operation during programming, the SEND/LEARN indicator flashes three times quickly, and the remote controller exits the programming mode. Resume from Step 2.
- If a failure occurs during programming, the SEND/LEARN indicator flashes three times quickly, and the remote controller exits the programming mode. Resume from Step 3.
- If a failure occurs five times in row during programming, the remote controller exits the programming mode. Resume from Step 3.
- If you try to program beyond the learning capacity of the remote controller, the SEND/LEARN indicator flashes six times quickly, and the remote controller exits the programming mode. Try programming under a different MODE button.
- When you want to program a command to a button to which you have already programmed a command, simply follow the same procedure given and programming for that button will be overwritten.
- The remote controller uses infrared rays to send its commands, as do most other remote controllers. Though most remote controller codes can be memorized by the remote controller, be aware that some remote controllers use a system that is quite different from the remote controller and therefore may not be able to be programmed.
- Some remote controllers have a single button that performs multiple functions (for example, the function may change each time the button is pressed). If this is the case, each function must be programmed to a separate button on the remote controller.
- Once you have transferred the commands from the other remote controller, refer to the instruction manual that came with that product for instructions on how to operate that product.
- Make sure both the remote controller and the other remote controller have new batteries. If either of them has batteries that are low, you may not be able to program the commands of the other remote controller properly into the remote controller.

See page 70 for how to erase the memorized commands from all buttons.

Programming the commands of remote controllers for other devices into the remote controller

SEND/LEARN indicator
MODE buttons

ENTER

Erasing the programmed command from one button

You can only erase memorized commands and not preset ones.

1. **Press and hold down the desired MODE button for the command, press the ENTER button, and then release both buttons.**

   When you press the MODE button, the SEND/LEARN indicator lights. When you press the ENTER button, the lamp turns off. When you release the buttons, the lamp lights again.

2. **Press and release the button for the command you wish to erase.**

   When you press the button, the SEND/LEARN indicator turns off. When you release the button, the lamp lights again.

3. **Press and release the same button again.**

   The SEND/LEARN lamp flashes twice slowly. The memorized command is erased.

   Note:
   If no button is pressed for more than 30 seconds during the erasing procedure, the SEND/LEARN indicator flashes three times quickly, and the remote controller exits the erasing mode. Resume from Step 1.

SEND/LEARN indicator
MODE buttons

ENTER

Erasing all the commands programmed under a MODE button

1. **Press and hold down the desired MODE button, press the ENTER button twice, and then release both buttons.**

   When you press the MODE button, the SEND/LEARN indicator lights. When you press the ENTER button, the lamp turns off. When you release the buttons, the lamp flashes twice slowly and then lights again.

2. **Press and release the same MODE button again.**

   When you release the button, the SEND/LEARN indicator flashes twice slowly. This erases all the commands memorized to the MODE button.

   Notes:
   • If no button is pressed for more than 30 seconds during the erasing procedure, the SEND/LEARN indicator flashes three times quickly and the remote controller exits the erasing mode. Resume from Step 1.

   • If you perform an invalid operation during erasing, the SEND/LEARN indicator flashes three times quickly, and the remote controller exits the erasing mode. Resume from Step 1.

   • If many commands have been programmed to the MODE button, then the SEND/LEARN indicator may remain lit for up to 20 seconds during Step 2. This is not a malfunction.

Using a Macro function

What is a Macro function?

A Macro function enables you to program a series of button operations (up to 16) on the remote controller into a single button. For example, to play a compact disc player connected to the DTR-7.2 normally, you must perform the following steps:

1. Press the RCVR MODE button.

2. Press the ON button.

3. Press the CD (INPUT SELECTOR) button.

4. Press the CD MODE button.

5. Press the playback (▷) button.

By using the macro function, you can perform the above five operations by **only pressing two buttons**.
Tips:
- If you erase or change the command of a button programmed in a macro, that operation of that button will no longer work in the macro. In this case, it will be necessary for you to reprogram the macro in order to avoid incorrect operation.
- The codes programmed into a macro will be transmitted at an interval of 0.5 seconds. However, some devices may not be able to complete one operation in 0.5 seconds and may miss the next code. In this case, after pressing one operation button, you can press the same MODE button again before pressing the next operation button to add another 0.5 seconds between the two operations.

Programming a Macro function

You can program a different macro into the MODE MACRO button for each of the eight MODE buttons. The macro is then executed by pressing the appropriate MODE button and then pressing the MODE MACRO button. For example, to program the macro described above into the CD MODE button, perform the steps given below.

1. Press and hold down the desired MODE button (in this case, the CD MODE button), press the MODE MACRO button, and then release both buttons.

   When you press the CD MODE button, the SEND/LEARN indicator lights and the CD MODE button lights green. When you press the MODE MACRO button, the indicator turns off. When you release the buttons, the indicator flashes and lights again.

2. Press the operation buttons you wish to program in order (in this case, press RCVR MODE → ON → CD (INPUT SELECTOR) → CD MODE → playback (▷) button).

   When you press each button, the SEND/LEARN indicator turns off. When you release the button, the indicator lights.

3. Press the MODE MACRO button to complete the programming.

   The SEND/LEARN indicator flashes twice slowly.

4. Run the macro to check to see if the macro has been properly programmed.

Notes:
- You may program up to 16 button operations into each macro function. If you try to program a 17th operation, it will be ignored, and programming is stopped.
- If no button is pressed for more than 30 seconds during the programming, the SEND/LEARN indicator flashes three times quickly, and the remote controller exits the programming mode. Resume from Step 1.
- If you perform an invalid operation during programming, the SEND/LEARN indicator flashes three times quickly, and the remote controller exits the programming mode. Resume from Step 1.

Running a Macro function

Perform the procedure below to run a macro function that you have programmed into the remote controller. After programming a macro, you should always run it at least once to make sure that it has been programmed properly.

1. Point the remote controller at the DTR-7.2 and press the CD MODE button.

2. Press the MODE MACRO, and verify that the devices operate properly.

   It may take a while for the macro to finish transmitting, so be sure to continue pointing the remote controller at the device until the SEND/LEARN indicator turns off.

Using a Macro function

ON
DIRECT MACRO
CD MODE
MODE buttons
RCVR
(CD playback)
CD (INPUT SELECTOR)
Tips:
- If you erase or change the command of a button programmed in the direct macro, that operation of that button will no longer work in the macro. In this case, it will be necessary for you to reprogram the direct macro in order to avoid incorrect operation.
- The codes programmed into a direct macro will be transmitted at an interval of 0.5 seconds. However, some devices may not be able to complete one operation in 0.5 seconds and may miss the next code. In this case, after pressing one operation button, you can press the same MODE button again before pressing the next operation button to add another 0.5 seconds between the two operations.

Programming the Direct Macro function

With the direct macro function, you can program a series of button operations as a macro into the DIRECT MACRO button so the macro can be executed with just one touch. Note that for the direct macro function, only one macro can be programmed. For example, to program the macro described on the previous page for the DIRECT MACRO button, perform the steps given below.

1. **Press and hold down any one of the eight MODE buttons, press the DIRECT MACRO button, and then release both buttons.**

   When you press the MODE button, it lights green and the SEND/LEARN indicator lights. When you press the DIRECT MACRO button, the indicator turns off. When you release the buttons, the indicator flashes briefly and then lights again.

2. **Press the operation buttons you wish to program in order (in this case, press RCVR MODE → ON → CD (INPUT SELECTOR) → CD MODE → playback (▷) button).**

   When you press each button, the SEND/LEARN indicator turns off. When you release the button, the indicator lights.

3. **Press the DIRECT MACRO button to complete the procedure.**

   The SEND/LEARN indicator flashes twice slowly.

4. **Check to see if the macro has been properly programmed.**

Notes:
- You may program up to 16 button operations into the direct macro function. If you try to program a 17th operation, it will be ignored, and programming is stopped.
- If no button is pressed for more than 30 seconds during the programming, the SEND/LEARN indicator flashes three times quickly, and the remote controller exits the programming mode. Resume from Step 1.
- If you perform an invalid operation during programming, the SEND/LEARN indicator flashes three times quickly, and the remote controller exits the programming mode. Resume from Step 1.

Running a Direct Macro function

Perform the procedure below to run a direct macro function that you have programmed into the remote controller. After programming a direct macro, you should always run it at least once to make sure that it has been programmed properly.

Point the remote controller at the DTR-7.2 and press the DIRECT MACRO button.

It may take a while for the macro to finish transmitting, so be sure to continue pointing the remote controller at the device until the SEND/LEARN indicator turns off.

Using a Macro function

MODE MACRO
MODE buttons

Erasing a macro from the MODE MACRO button

1. **Press and hold down the desired MODE button, press the MODE MACRO button, and then release both buttons.**

   When you press the MODE button, it lights green and the SEND/LEARN indicator lights. When you press the MODE MACRO button, the indicator turns off. When you release the buttons, the indicator flashes once.

2. **Press the MODE MACRO button again.**

   The SEND/LEARN indicator flashes twice slowly. The macro programmed to the MODE button pressed in Step 1 above is erased.

Notes:
* If no button is pressed for more than 30 seconds during the erasing procedure, the SEND/LEARN indicator flashes three times quickly, and the remote controller exits the erasing mode. Resume from Step 1.

* Be aware that if you press a button other than MODE MACRO button in Step 2, then you will in effect be overwriting the previous macro with a new macro.

DIRECT MACRO
MODE buttons

Erasing a direct macro from the DIRECT MACRO button

1. **Press and hold down any one of the eight MODE buttons, press the DIRECT MACRO button, and then release both buttons.**

   When you press the MODE button, it lights green and the SEND/LEARN indicator lights. When you press the DIRECT MACRO button, the indicator turns off. When you release the buttons, the indicator flashes once.

2. **Press the DIRECT MACRO button again.**

   The SEND/LEARN indicator flashes twice slowly. The macro programmed to the DIRECT MACRO button is erased.

Notes:
* If no button is pressed for more than 30 seconds during the erasing procedure, the SEND/LEARN indicator flashes three times quickly, and the remote controller exits the erasing mode. Resume from Step 1.

* Be aware that if you press a button other than DIRECT MACRO button in Step 2, then you will in effect be overwriting the previous direct macro with a new direct macro.

69

Using a Macro function
Erasing all commands and macros that have been programmed

This procedure will erase all the commands and macros that you have programmed into the remote controller and return it to its default settings. This operation will not affect the preset settings of the remote controller.

1. **Open the battery cover and remove the batteries from the remote controller.**

2. **While pressing and holding down the ON and STDBY buttons, re-insert the batteries in their correct orientation, and then release both buttons.**

   The SEND/LEARN indicator flashes slowly.

3. **Press the ENTER button.**

   The SEND/LEARN indicator lights up for about ten seconds and then turns off.

All programmed commands and macros are erased and the remote controller returns to its factory presets.

Notes:
- Proceed to Step 3 immediately after Step 2; otherwise, the batteries will be consumed quickly.
- If you press any button other than the ENTER button in Step 3, nothing will be erased. In this case, resume from Step 1.

Specifications

AMPLIFIER SECTION

Continuous Average Power output (FTC)

All channels:	**100 watts per channel min. RMS at 8 ohms, 2 channels driven from 20 Hz to 20 kHz with no more than 0.08% total harmonic distortion. 130 watts min. RMS at 6 ohms, 2 channels driven from 1 kHz with no more than 0.1% total harmonic distortion.**
Continuous Power output (DIN)	135 watts at 6 ohms
Maximum Power output (EIAJ)	160 watts at 6 ohms
Dynamic Power Output (Stereo)	2×250 watts at 3 ohms
	2×210 watts at 4 ohms
	2×130 watts at 8 ohms
Total Harmonic Distortion:	0.08% at rated power
	0.08% at 1 Watt output
IM Distortion:	0.08% at rated power
	0.08% at 1 Watt output
Damping Factor:	60 at 8 ohms

Input Sensitivity and Impedance

PHONO:	2.5 mV, 50 kohms
LINE (CD, TAPE, DVD, VIDEO 1-5):	200 mV, 50 kohms
MULTICHANNEL INPUT (FRONT L/C/R, SURROUND L/R, SURROUND BACK L/R):	200 mV, 50 kohms
(SUBWOOFER):	36 mV, 50 kohms
COAXIAL 1, 2, 3 (DIGITAL):	0.5 Vp-p, 75 ohms
DVD, VIDEO 1, 2, 3, 4, 5:	1 Vp-p, 75 ohms
	1 Vp-p, 75 ohms (Y)
	0.28 Vp-p, 75 ohms (C)
COMPONENT VIDEO 1, 2:	1 Vp-p, 75 ohms (Y)
	0.7 Vp-p, 75 ohms (P_B, P_R)

Output Level and Impedance

Rec out (TAPE, VIDEO 1, 2):	200 mV, 470 ohms
Pre out:	1 V, 470 ohms
ZONE 2 OUT:	100mV, 470 ohms
VIDEO (VIDEO 1, 2, MONITOR OUT, ZONE 2 OUT):	1 Vp-p, 75 ohms
	1 Vp-p, 75 ohms (Y)
	0.28 p-p, 75 ohms (C)
COMPONENT VIDEO OUT:	1 Vp-p, 75 ohms (Y)
	0.7 Vp-p, 75 ohms (P_B, P_R)
Phono Overload:	120 mV RMS at 1 kHz, 0.5% T.H.D.
Frequency Response:	5 Hz to 100 kHz : +1/–3 dB (CD in Direct mode)
RIAA Deviation:	20 Hz to 20 kHz : ±0.8 dB

Tone Control

Bass:	±10 dB at 50 Hz
Treble:	±10 dB at 20,000 Hz

Signal-to-Noise Ratio (Stereo)

Phono:	80 dB (IHF A, 5 mV input)
CD/Tape:	110 dB (IHF A, 0.5 V input)

TUNER SECTION

FM

Tuning Range:	87.5 — 108.0 MHz (50 kHz steps)

Usable Sensitivity

Mono:	11.2 dBf, 1.0 µV (75 ohms IHF)
	0.9 µV (75 ohms DIN)
Stereo:	17.2 dBf, 2.0 µV (75 ohms IHF)
	23 µV (75 ohms DIN)

50 dB Quieting Sensitivity

Mono:	17.2 dBf, 2.0 µV (75 ohms)
Stereo:	37.2 dBf, 20 µV (75 ohms)
Capture Ratio:	2.0 dB
Image Rejection Ratio:	40 dB
IF Rejection Ratio:	90 dB

Signal-to-Noise Ratio

Mono:	76 dB
Stereo:	70 dB
Alternate Channel Attenuation:	55 dB
Selectivity:	50 dB (DIN)
AM Suppression Ratio:	50 dB

Total Harmonic Distortion

Mono:	0.2%
Stereo:	0.3%
Frequency Response:	30 Hz — 15 kHz, ±1.0 dB
Stereo Separation:	45 dB at 1 kHz
	30 dB at 100 Hz — 10 kHz

AM

Tuning Range:	530 to 1,710 kHz (10-kHz steps)
Usable Sensitivity:	30 µV
Image Rejection Ratio:	40 dB
IF Rejection Ratio:	40 dB
Signal-to-Noise Ratio:	40 dB
Total Harmonic Distortion:	0.7%

GENERAL

Power Supply:	AC 120 V, 60 Hz
Power Consumption:	6.8 A
Dimensions (W × H × D):	17-1/8" × 6-7/8" × 18-1/8"
	435 × 175 × 460 mm
Weight:	36.2 lbs. (16.4 kg)

REMOTE CONTROLLER

Transmitter:	Infrared
Signal range:	Approx. 16 ft., 5 meters
Power supply:	Two "AA" batteries (1.5 V × 2)

Specifications and features are subject to change without notice.

71

Troubleshooting guide

If a problem occurs while you are using the remote controller, first try to operate the controls on the front panel of the DTR-7.2 to make sure that it is not due to a malfunction (or worn out batteries) in the remote controller.

POWER

Power shuts off immediately after power on.

- Amplifier protection circuitry has been activated.
  → Remove the power cord from outlet immediately. Contact your Integra/Onkyo service station.

No power.

- Power cord is disconnected.
  → Connect power cord.
- External noise in the affecting the internal microcomputer.
  → Turn the power button off and then on again or remove the power cord from the outlet and then plug it in again.
- Internal fuse is blown.
  → Contact your Integra/Onkyo Service Station.

Power turns on but no sound.

- "Muting" is displayed.
  → Press the MUTING button on the remote controller to turn it off.
- Bad connections or wiring.
  → Check connections, speaker cables, etc.
- Amplifier protection circuitry has been activated.
  → Contact your Integra/Onkyo Service Station.

The sound of the playback source is not heard.

- Input selector is not set properly.
  → Set to correct input source.
- Headphones are connected.
  → Lower volume and then disconnect headphones.

SPEAKERS

No sound from the center speaker, or at very low volume.

- Speaker cable is not connected.
  → Check the connection between the amplifier and the speaker.
- Listening mode is set to Stereo or Direct.
  → Set the Listening mode to any mode other than Stereo or Direct. The output to the center speaker may differ depending on the listening mode.
- Center speaker level is set to minimum.
  → Set the Center speaker level to the appropriate volume (page 32).
- The Center setting of the Speaker Config submenu is set to "None."
  → Set the Center setting at the Speaker Config submenu to "Large" or "Small" (see page 30).

No sound or very low volume from subwoofer.

- Subwoofer is set to "No."
  → Check the speaker setting (pages 30, 42).
- Subwoofer speakers output level setting is improper.
  → Check the output level of the Subwoofer using the test tone.

Low frequency humming is heard.

- Not properly grounded.
  → Check outer conductor of input plugs.
- Turntable motor is not properly grounded.
  → Check for proper ground connection.
- Audio connection cables on the rear panel are connected incorrectly.
  → Adjust the placement of the cable to reduce hum.

Howling is heard when the volume is turned up.

- Turntable and speakers are located too close together.
  → Move them farther apart.

Rough or scratchy sound is heard. High range is not clear.

- The needles of turntable is dirty or worn, or a problem exists with a connected component.
  → Refer to the instruction of the connected components and check for problem.
- Treble control is too high.
  → Turn treble down (see page 41).

No sound is output from the surround back speakers.

- The setting for the surround back speakers does not match the actual configuration.
  → Check the Surr Back Out setting (OSD MenuSpeaker Setup → Speaker Config). If one surround back speaker is connected, select "1 ch," and if two surround back speakers are connected, select "2 ch" (page 30).

FM/AM TUNER

AM stations cannot be received.

- AM loop antenna is not connected.
  → Connect the included AM loop antenna to the AM antenna terminals.

Buzzing noise on AM stations (particularly noticeable at night or with weak stations).

- Noise from electrical apparatus such as fluorescent lamp.
  → Move the AM loop antenna to different position.
  → Set up an outdoor AM antenna.

Noise is heard at high-pitched sounds on AM stations.

- Noise from TV set.
  → Place the AM loop antenna as far as possible from the TV.
  → Move unit away from TV set.

Crackling noise on both AM and FM stations.

- Noise caused by fluorescent lamp being turned on and off.
  → Move antenna as far as possible from the fluorescent lamp.
- Noise from automobile ignition.
  → Install an FM outdoor antenna as far as possible from the road.
  → Change the position or direction of the outdoor antenna.

The indicators light for stereo reception, but sound is distorted and stereo separation is bad.

- Station is too strong.
  → Change to FM indoor antenna.
- Multiple reflection of the radio waves because of tall buildings or mountains.
  → Use antenna that has better directivity and select a point where distortion is least.

Indicators for stereo reception flicker and hiss is heard on FM stations.

- Station is too weak.
  → Install an outdoor FM antenna.
- Stereo FM broadcasts cover only about half the distance of an ordinary broadcast.
  → Change the position or direction of the outdoor antenna.

No preset station is recalled.

- Power cord has been unplugged or the Power switch has been turned off for a long time.
  → The memory contents are lost. Store all stations again.

Troubleshooting guide

VIDEO and AUDIO

Desired picture does not appear.
- Improper connection.
    → Check the connection again. Insert the plugs and connectors completely.

No OSD Menu display.
- Improper connection.
    → Check connections.
- OSD Menu is displayed when monitor is connected to VIDEO or S VIDEO of MONITOR OUT.
    → Confirm connections (see page 19).

No sound, or sound of the selected source is not heard.
- Input Setup menu settings are incorrect.
    → Check settings (see page 34).

No picture appears on the TV screen (or monitor).
- TV (or monitor) is not set to receive the output signals from the receiver.
    → Set the TV (or monitor) to the receiver input.
- Video cable is not connected securely.
    → Check connections.
- You have connected to the COMPONENT VIDEO connectors but the DTR-7.2 is not set properly.
    → Check the Video Setup submenu of the Input Setup menu (page 36).

REMOTE CONTROLLER

Front panel controls function but remote controller controls do not.
- No batteries in remote controller.
    → Insert batteries.
- Batteries have worn out.
    → Replace batteries.
- Remote controller is not pointed at the remote sensor of the DTR-7.2.
    → Point the remote controller at the remote sensor of the DTR-7.2.
- Remote controller is too far from the DTR-7.2.
    → Operate the remote controller within 16 feet (5 meters).
- Remote controller is functioning in a different mode
    → Press the RCVR MODE button.

OTHER

LATE NIGHT function cannot be used.
- Playback source is not Dolby Digital encoded.
    → Check that the DOLBY DIGITAL indicator lights up on the display.

Re-EQ function cannot be used.
- Listening mode is set to Theater-Dimensional, Direct, PL II Music, or Neo:6 Music.
    → See page 44.

Parameter cannot be set for Front Effect etc.
- Parameter may not be able to be set depending on the listening mode.
    → See table on page 45.

Multichannel audio is not output.
- To listen to multichannel audio, "Yes" must be selected in the "Multichannel" in the Multichannel setup sub-menu of the Input Setup menu. Also, it is necessary to select Multichannel with the Audio Selector button.
    → Check that the component is connected to the MULTI CHANNEL INPUT port and check the Setup menu settings.

Components in remote zone (Zone 2) do not operate properly.
- Components are incorrectly connected.
    → Check connections.
- Objects are interfering with remote controller signals.
    → Move inferring objects away from path of remote controller signals.

If one of the messages shown below appears

"Not available with headphones use"
The operation is not allowed because headphones are plugged into the DTR-7.2.

"Not available with Multichannel use"
Cannot be used while the multi-channel output is being used.

"Not available in this Sp Config"
Will not work with the current speaker configuration settings.

"Not available in Zone 2 mode"
The operation is not allowed because the Zone 2 mode is turned on.

"Only available with Dolby D"
No setting other than Dolby Digital can be set.

"Not available in this Listening mode"
Will not work with the current listening mode.

"Not available with this signal"
The listening mode cannot be selected with the current input source.

"Not available with Muting"
Will not work because the muting is activated.

"Zone 2 is not On"
Will not work because the Zone 2 has not been turned on.

Also refer to the respective instruction manuals of the compact disc player, DVD player, video cassette recorder, TV monitor, etc., that compose your entertainment system.
The DTR-7.2 contains an internal microcomputer that performs high-level operations. However, on extremely rare occasions, noise or interference from an external source or static electricity may cause faulty operation. If this occurs, unplug the power cord from the wall outlet, wait five or more seconds, and then plug it back in. This should correct the situation.

* To reset the surround mode and other settings to the factory default settings, hold down the Video 1 button with the DTR-7.2 turned on and then press the Standby/On button. "CLEAR" appears in the front display and the DTR-7.2 enters the standby state.
